1 Before You Start

Welcome to Distributed Cache Service (DCS). DCS is an online, distributed, in-memory cache service compatible with Redis. It is reliable, scalable, usable out of the box, and easy to manage, meeting your requirements for high read/write performance and fast data access.

In addition to the web console, you can also invoke APIs for managing your DCS O&M resources. This document describes how to use application programming interfaces (APIs) to perform operations on DCS, such as creating, deleting, and scaling up DCS instances. For details about all supported operations, see [API Overview](#).

DCS supports Representational State Transfer (REST) APIs, allowing you to call APIs using HTTPS. For details about API calling, see [Calling APIs](#).

NOTICE

- Some APIs are supported only in certain regions.
- DCS is continuously upgraded with new functions, and the existing APIs are inevitably adjusted. For example, new response parameters may be added.
- To reduce the impact of API changes, DCS is backward compatible with APIs when possible. However, when you use DCS, you should accept and ignore unused parameters and parameter values in returned content (in JSON format).

Endpoints

An endpoint is the **request address** for calling an API. Endpoints vary depending on services and regions. For the endpoints of all services, see [Regions and Endpoints](#).

Concepts

- Account

An account is created upon successful registration. The account has full access permissions for all of its cloud services and resources. It can be used to reset user passwords and grant user permissions. The account is a payment entity and should not be used directly to perform routine management. To ensure

security, create Identity and Access Management (IAM) users and grant them permissions for routine management.

- IAM user

A user is created in IAM to use cloud services. Each user has its own identity credentials (password and access keys).

The account name, username, and password will be required for API authentication.

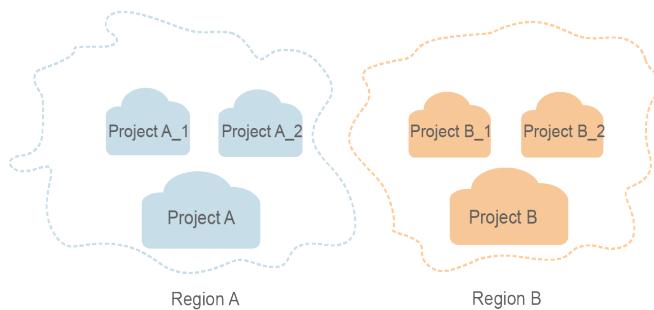

- Regions are geographic areas isolated from each other. Resources are region-specific and cannot be used across regions through internal network connections. For low network latency and quick resource access, select the nearest region.

- An AZ contains one or more physical data centers. Each AZ has independent cooling, fire extinguishing, moisture-proof, and electricity facilities. Within an AZ, compute, network, storage, and other resources are logically divided into multiple clusters. AZs within a region are interconnected by high-speed optical fibers for building cross-AZ high-availability systems.

- Project

A project corresponds to a region. Projects group and isolate resources (including compute, storage, and network resources) across physical regions. Users can be granted permissions in a default project to access all resources in the region associated with the project. For more refined access control, create subprojects under a project and create resources in the subprojects. Users can then be assigned permissions to access only specific resources in the subprojects.

Figure 1-1 Project isolating model

- Enterprise project

Enterprise projects group and manage resources across regions. Resources in enterprise projects are logically isolated. An enterprise project can contain resources of multiple regions, and resources can be added to or removed from enterprise projects.

2 API Overview

Table 2-1 APIs provided by DCS

Type	Description
Lifecycle Management APIs	Create, query, delete, modify, and scale instances.
Instance Management APIs	Restart instances, query instance status, change passwords, and query instance statistics.
Parameter Management APIs	Query and modify instance configuration parameters.
Data Migration APIs	Create data migration tasks.
Backup and Restoration APIs	Back up and restore instances, and view backup and restoration records.
Tag Management APIs	Add and delete tags, query tags of a specified instance, and query tags of a tenant.
Other APIs	Query AZ information, product specifications, and maintenance time window.

3 Calling APIs

[Making an API Request](#)

[Authentication](#)

[Response](#)

3.1 Making an API Request

This section describes the structure of a REST API request, and uses the IAM API for obtaining a user token as an example to demonstrate how to call an API. The obtained token can then be used to authenticate the calling of other APIs.

Request URI

A request URI is in the following format:

{URI-scheme}://{Endpoint}/{resource-path}?{query-string}

Although a request URI is included in the request header, most programming languages or frameworks require the request URI to be transmitted separately.

Table 3-1 Parameters in a URI

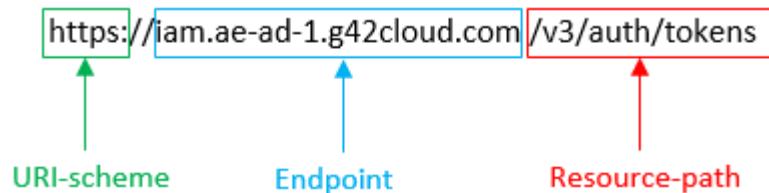

Parameter	Description
URI-scheme	Protocol used to transmit requests. All APIs use HTTPS.
Endpoint	Domain name or IP address of the server bearing the REST service endpoint. The endpoint varies between services in different regions. It can be obtained from Regions and Endpoints . For example, the endpoint of IAM in the ae-ad-1 region is iam.ae-ad-1.g42cloud.com .

Parameter	Description
resource-path	Access path of an API for performing a specified operation. Obtain the path from the URI of an API. For example, the resource-path of the API used to obtain a user token is /v3/auth/tokens .
query-string	Query parameter, which is optional. Ensure that a question mark (?) is included before each query parameter that is in the format of "Parameter name=Parameter value". For example, ? limit=10 indicates that a maximum of 10 data records will be displayed.

For example, to obtain an IAM token in the **ae-ad-1** region, obtain the endpoint of IAM (**iam.ae-ad-1.g42cloud.com**) for this region and the **resource-path** (**/v3/auth/tokens**) in the URI of the API used to **obtain a user token**. Then, construct the URI as follows:

`https://iam.ae-ad-1.g42cloud.com/v3/auth/tokens`

Figure 3-1 Example URI

NOTE

To simplify the URI display in this document, each API is provided only with a **resource-path** and a request method. The **URI-scheme** of all APIs is **HTTPS**, and the endpoints of all APIs in the same region are identical.

Request Methods

The HTTP protocol defines the following request methods that can be used to send a request to the server:

- **GET**: requests the server to return specified resources.
- **PUT**: requests the server to update specified resources.
- **POST**: requests the server to add resources or perform special operations.
- **DELETE**: requests the server to delete specified resources, for example, an object.
- **HEAD**: same as GET except that the server must return only the response header.
- **PATCH**: requests a server to update a part of a specified resource. If the resource does not exist, a new resource will be created.

For example, in the case of the API used to obtain a user token, the request method is POST. The request is as follows:

POST https://iam.ae-ad-1.g42cloud.com/v3/auth/tokens

Request Header

You can also add additional fields to a request, such as the fields required by a specified URI or an HTTP method. For example, to request for the authentication information, add **Content-Type**, which specifies the request body type.

Common request headers are as follows:

- **Content-Type**: specifies the request body type or format. This field is mandatory and its default value is **application/json**. Other values of this field will be provided for specific APIs if any.
- **X-Auth-Token**: specifies a user token only for token-based API authentication. The user token is a response to the API used to obtain a user token. This API is the only one that does not require authentication.

NOTE

In addition to supporting token-based authentication, also support authentication using access key ID/secret access key (AK/SK). During AK/SK-based authentication, an SDK is used to sign the request, and the **Authorization** (signature information) and **X-Sdk-Date** (time when the request is sent) header fields are automatically added to the request.

For details, see [AK/SK-based Authentication](#).

The API used to obtain a user token does not require authentication. Therefore, only the **Content-Type** field needs to be added to requests for calling the API. An example of such requests is as follows:

POST https://iam.ae-ad-1.g42cloud.com/v3/auth/tokens
Content-Type: application/json

Request Body

The body of a request is often sent in a structured format as specified in the **Content-Type** header field. The request body transfers content except the request header.

The request body varies between APIs. Some APIs do not require the request body, such as the APIs requested using the GET and DELETE methods.

In the case of the API used to obtain a user token, the request parameters and parameter description can be obtained from the API request. The following provides an example request with a body included. Set **username** to the name of a user, **domainname** to the name of the account that the user belongs to, ********* to the user's login password, and **xxxxxxxxxxxxxxxxxxxx** to the project name. You can learn more information about projects from [Regions and Endpoints](#). Check the value of the **Region** column.

NOTE

The **scope** parameter specifies where a token takes effect. You can set **scope** to an account or a project under an account. In the following example, the token takes effect only for the resources in a specified project. For more information about this API, see [Obtaining a User Token](#).

POST https://iam.ae-ad-1.g42cloud.com/v3/auth/tokens

```
Content-Type: application/json

{
  "auth": {
    "identity": {
      "methods": [
        "password"
      ],
      "password": {
        "user": {
          "name": "username",
          "password": "*****",
          "domain": {
            "name": "domainname"
          }
        }
      }
    },
    "scope": {
      "project": {
        "name": "xxxxxxxxxxxxxxxxxx"
      }
    }
  }
}
```

If all data required by a request is available, you can send the request to call an API through [curl](#), [Postman](#), or coding. In the response to the API used to obtain a user token, **x-subject-token** is the desired user token. This token can then be used to authenticate the calling of other APIs.

3.2 Authentication

Requests for calling an API can be authenticated using either of the following methods:

- Token-based authentication: Requests are authenticated using a token.
- AK/SK-based authentication: Requests are authenticated by encrypting the request body using an AK/SK pair. AK/SK-based authentication is recommended because it is more secure than token-based authentication.

Token-based Authentication

NOTE

The validity period of a token is 24 hours. When using a token for authentication, cache it to prevent frequently calling the IAM API used to obtain a user token.

A token specifies temporary permissions in a computer system. During API authentication using a token, the token is added to requests to get permissions for calling the API.

You can obtain a token by [calling an API](#).

A cloud service can be deployed as either a project-level service or global service.

- For a project-level service, you need to obtain a project-level token. When you call the API, set **auth.scope** in the request body to **project**.
- For a global service, you need to obtain a global token. When you call the API, set **auth.scope** in the request body to **domain**.

When calling the API used for [obtaining a user token](#), you must set **auth.scope** in the request body to **project**.

```
{  
    "auth": {  
        "identity": {  
            "methods": [  
                "password"  
            ],  
            "password": {  
                "user": {  
                    "name": "username", //IAM username.  
                    "password": "*****", //IAM user password. You are advised to store it in ciphertext in the configuration file or an environment variable.  
                    "domain": {  
                        "name": "domainname" //Name of the account of the IAM user.  
                    }  
                }  
            }  
        },  
        "scope": {  
            "project": {  
                "name": "xxxxxxx" //Project name.  
            }  
        }  
    }  
}
```

After a token is obtained, the **X-Auth-Token** header field must be added to requests to specify the token when calling other APIs. For example, if the token is **ABCDEFJ....**, **X-Auth-Token: ABCDEFJ....** can be added to a request as follows:

```
POST https://iam.ae-ad-1.g42cloud.com/v3/auth/tokens  
GET https://iam-apigateway-proxy.{region0_id}.{external_global_domain_name}/v3/auth/projects  
Content-Type: application/json  
X-Auth-Token: ABCDEFJ....
```

AK/SK-based Authentication

NOTE

AK/SK-based authentication supports API requests with a body not larger than 12 MB. For API requests with a larger body, token-based authentication is recommended.

In AK/SK-based authentication, AK/SK is used to sign requests and the signature is then added to the requests for authentication.

- AK: access key ID, which is a unique identifier used in conjunction with a secret access key to sign requests cryptographically.
- SK: secret access key used in conjunction with an AK to sign requests cryptographically. It identifies a request sender and prevents the request from being modified.

In AK/SK-based authentication, you can use an AK/SK to sign requests based on the signature algorithm or use the signing SDK to sign requests. For details about how to sign requests and use the signing SDK, see [API Request Signing Guide](#).

NOTICE

The signature SDK only supports signature, which is different from the SDKs provided by services.

3.3 Response

Status Code

After sending a request, you will receive a response, including a status code, response header, and response body.

A status code is a group of digits, ranging from 1xx to 5xx. It indicates the status of a request. For more information, see [Status Codes](#).

For example, if status code **201** is returned for calling the API used to obtain a user token, the request is successful.

Response Header

Similar to a request, a response also has a header, for example, **Content-Type**.

[Figure 3-2](#) shows the response header for the API used to obtain a user token. The **x-subject-token** header field is the desired user token. This token can then be used to authenticate the calling of other APIs.

Figure 3-2 Header fields of the response to the request for obtaining a user token

```
connection → keep-alive
content-type → application/json
date → Tue, 12 Feb 2019 06:52:13 GMT
server → Web Server
strict-transport-security → max-age=31536000; includeSubdomains;
transfer-encoding → chunked
via → proxy A
x-content-type-options → nosniff
x-download-options → noopener
x-frame-options → SAMEORIGIN
x-iam-trace-id → 218d45ab-d674-4995-af3a-2d0255ba41b5
x-subject-token → MIIYXQVJKoZIhvNAQcCoIIYTjCCGEoCAQEeDTALBglghkgBZQMEAgEwgharBqkjhkiG9w0BBwGgg hacBIIWmHsidG9rZW4iOnsiZXhwaXJlc19hdCl6jjlwMTktMDItMTNUMCfj3Ks6vgKnpVNrbW2eZ5eb78SZOkjACgkijCMZSEB7bUGd5UjeRASX1jiPPEGA270g1FrUo0LbjqglFkNPQuFSOU8+uSstVwRtNtsC+qTp22Rkd5MCqFGQ8LcuUxC3a+9CMBnOintWW7oeRUvhVpxk8pxiX1wTEboX-RzT6MUbpvGw-oPNFYxJECKnoH3HRozv0vN--n5d6Nbvg=-
x-xss-protection → 1; mode=block;
```

Response Body

The body of a response is often returned in structured format as specified in the **Content-Type** header field. The response body transfers content except the response header.

The following is part of the response body for the API used to obtain a user token.

```
{
  "token": {
    "expires_at": "2019-02-13T06:52:13.855000Z",
```

```
"methods": [
    "password"
],
"catalog": [
{
    "endpoints": [
        {
            "region_id": "XXXXXX",
        }
    ]
}
```

If an error occurs during API calling, an error code and a message will be displayed. The following shows an error response body.

```
{
    "error": {
        "code": "111400060",
        "message": "instance name exists."
    }
}
```

In the response body, **error_code** is an error code, and **error_msg** provides information about the error.

4 Lifecycle Management APIs

- [Creating a DCS Instance](#)
- [Deleting a Single DCS Instance](#)
- [Batch Deleting DCS Instances](#)
- [Querying a DCS Instance](#)
- [Querying All DCS Instances of a Tenant](#)
- [Modifying Information About a DCS Instance](#)
- [Scaling Up a DCS Instance](#)

4.1 Creating a DCS Instance

Function

This API is used to create a DCS instance.

URI

POST /v1.0/{project_id}/instances

Table 4-1 describes the parameter.

Table 4-1 Parameter description

Parameter	Type	Mandatory	Description
project_id	String	Yes	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .

Request

Request parameters

Table 4-2 describes the request parameters.

Table 4-2 Parameter description

Parameter	Type	Mandatory	Description
name	String	Yes	DCS instance name. An instance name can contain 4 to 64 characters and must start with a letter. Only letters, digits, underscores (_), and hyphens (-) are allowed.
description	String	No	Brief description of the DCS instance. The description supports up to 1024 characters. NOTE The backslash (\) and quotation mark ("") are special characters for JSON messages. When using these characters in a parameter value, add the escape character (\) before the characters, for example, \\ and \".
engine	String	Yes	Cache engine. Value: Redis .
engine_version	String	Yes	Cache engine version. If the cache engine is Redis, the value can be 3.0, 4.0, 5.0, or 6.0 .
spec_code	String	Yes	DCS instance specification code. To obtain the value, go to the instance creation page on the DCS console, and view Flavor Name in the Instance Specification table.
capacity	Float	Yes	Cache capacity. Unit: GB. <ul style="list-style-type: none">For a single-node or master/standby DCS Redis 3.0 instance, the value can be 2, 4, 8, 16, 32, or 64. For a Proxy Cluster DCS Redis 3.0 instance, the value can be 64, 128, 256, 512, or 1024.For a single-node or master/standby DCS Redis 4.0 or later instance, the value can be 0.125, 0.25, 0.5, 1, 2, 4, 8, 16, 32, 24, 48, or 64. For a cluster DCS Redis instance, the value can be 4, 8, 16, 24, 32, 48, 64, 96, 128, 192, 256, 384, 512, 768, or 1024.

Parameter	Type	Mandatory	Description
no_password_access	String	Yes	<p>An indicator of whether a DCS instance can be accessed in password-free mode.</p> <ul style="list-style-type: none"> • true: indicates that a DCS instance can be accessed without a password. • false: indicates that a DCS instance can be accessed only after password authentication. <p>Default value: false.</p>
password	String	No	<p>Password of a DCS instance.</p> <p>NOTE If no_password_access is set to false or not set, the request must contain the password parameter.</p> <p>The password of a DCS Redis instance must meet the following complexity requirements:</p> <ul style="list-style-type: none"> • Must be a string consisting of 8 to 64 characters. • Must be different from the old password. • Contains at least three of the following character types: <ul style="list-style-type: none"> – Lowercase letters – Uppercase letters – Digits – Special characters (`~!@#\$^&*()_-+=\ {}<.>/?)
access_user	String	No	<p>If the cache engine is Redis, you do not need to set this parameter.</p> <p>If the cache engine is Memcached, this parameter is available only when no_password_access is set to false, indicating that you need to access the DCS instance in password mode.</p> <p>A username can contain 1 to 64 characters, including letters, digits, underscores (_), and hyphens (-), and must start with a letter.</p> <p>NOTE</p> <ul style="list-style-type: none"> • If the cache engine is Redis, you do not need to set this parameter.

Parameter	Type	Mandatory	Description
vpc_id	String	Yes	<p>VPC ID. Obtain the value by using either of the following methods:</p> <ul style="list-style-type: none"> Method 1: Log in to VPC console and view the VPC ID in the VPC details. Method 2: Call the API for querying VPCs. For details, see the "Querying VPCs" section in the <i>Virtual Private Cloud API Reference</i>.
security_group_id	String	Yes	<p>ID of the security group which the instance belongs to. This parameter is mandatory when the engine is Redis and engine_version is 3.0. DCS Redis 3.0 instances support access control by security groups. Redis 4.0 and later instances do not support access control by security groups. Obtain the value by using either of the following methods:</p> <ul style="list-style-type: none"> Method 1: Log in to the VPC console and view the security group ID on the security group details page. Method 2: Call the API for querying security groups. For details, see the "Querying Security Groups" section in the <i>Virtual Private Cloud API Reference</i>.
subnet_id	String	Yes	<p>Network ID of the subnet. Obtain the value by using either of the following methods:</p> <ul style="list-style-type: none"> Method 1: Log in to VPC console and click the target subnet on the Subnets tab page. You can view the network ID on the displayed page. Method 2: Call the API for querying subnets. For details, see the "Querying Subnets" section in the <i>Virtual Private Cloud API Reference</i>.

Parameter	Type	Mandatory	Description
available_zones	Array	Yes	<p>ID of the AZ where the cache node resides and which has available resources. For details on how to obtain the value, see Querying AZ Information. Check whether the AZ has available resources.</p> <p>Master/Standby, Proxy Cluster, and Redis Cluster DCS instances support cross-AZ deployment. You can specify an AZ for the standby node. When specifying AZs for nodes, use commas (,) to separate multiple AZs. For details, see the example request.</p>
instance_backup_policy	Object	No	<p>Backup policy.</p> <p>This parameter is available for master/standby and cluster DCS instances. For details, see Table 4-3 and Table 4-4.</p>
maintain_begin	String	No	<p>Time at which the maintenance time window starts.</p> <p>Format: hh:mm:ss.</p> <ul style="list-style-type: none"> The start time and end time of the maintenance time window must indicate the time segment of a supported maintenance time window. For details on how to query the time segments of supported maintenance time windows, see Querying Maintenance Time Window. The start time must be set to 22:00:00, 02:00:00, 06:00:00, 10:00:00, 14:00:00, or 18:00: 00. Parameters maintain_begin and maintain_end must be set in pairs. If parameter maintain_start is left blank, parameter maintain_end is also blank. In this case, the system automatically set the start time to 02:00:00.

Parameter	Type	Mandatory	Description
maintain_end	String	No	<p>Time at which the maintenance time window ends.</p> <p>Format: hh:mm:ss.</p> <ul style="list-style-type: none"> The start time and end time of the maintenance time window must indicate the time segment of a supported maintenance time window. For details on how to query the time segments of supported maintenance time windows, see Querying Maintenance Time Window. The end time is four hours later than the start time. For example, if the start time is 22:00:00, the end time is 02:00:00. Parameters maintain_begin and maintain_end must be set in pairs. If parameter maintain_end is left blank, parameter maintain_start is also blank. In this case, the system automatically set the end time to 06:00:00.
enterprise_project_id	String	No	Enterprise project ID.
enterprise_project_name	String	No	Enterprise project name.
instance_num	Integer	No	<p>Number of instances to be created in batches.</p> <p>Default value: 1.</p> <p>Value range: 1–100.</p>
port	Integer	No	<p>Port customization , which is supported only by Redis 4.0 and later instances and not by Redis 3.0 instances.</p> <p>If this parameter is not sent or is left empty when you create a Redis instance, the default port 6379 will be used. To customize a port, specify a port number in the range from 1 to 65535.</p>

Parameter	Type	Mandatory	Description
rename_commands	Object	No	Critical command renaming , which is supported only by Redis 4.0 and later instances and not by Redis 3.0 instances. If this parameter is not sent or is left empty when you create a Redis instance, no critical command will be renamed. Currently, you can rename the COMMAND , KEYS , FLUSHDB , FLUSHALL , HGETALL , SCAN , HSCAN , SSCAN , and ZSCAN commands.

Table 4-3 instance_backup_policy parameter description

Parameter	Type	Mandatory	Description
save_days	Integer	No	This parameter is mandatory when backup_type is set to manual . Retention period. Unit: day. Value range: 1–7.
backup_type	String	No	Backup type. Options: <ul style="list-style-type: none">• auto: automatic backup.• manual: manual backup. The default value is manual .
periodical_backup_plan	Object	Yes	Backup plan. For details, see Table 4-4 .

Table 4-4 periodical_backup_plan parameter description

Parameter	Type	Mandatory	Description
begin_at	String	Yes	Time at which backup starts. "00:00-01:00" indicates that backup starts at 00:00:00.
period_type	String	Yes	Interval at which backup is performed. Currently, only weekly backup is supported.

Parameter	Type	Mandatory	Description
backup_at	Array	Yes	Day in a week on which backup starts. Value range: 1–7, where 1 indicates Monday and 7 indicates Sunday.
timezone_offset	String	No	Time zone in which backup is performed. Value range: GMT–12:00 to GMT+12:00. If this parameter is left blank, the current time zone of the DCS-Server VM is used by default.

Example request

- Request URL:

```
POST https://{{dcs_endpoint}}/v1.0/{{project_id}}/instances
```

- Example:

```
{
  "name": "dcs-a11e",
  "description": "Create an instance",
  "engine": "Redis",

}

```

Response

Response parameters

Table 4-5 describes the response parameters.

Table 4-5 Parameter description

Parameter	Type	Description
instance_id	String	DCS instance ID.
instances	Array of Objects	DCS instance list. For details, see Table 4-6 .

Table 4-6 instances parameters

Parameter	Type	Description
instance_id	String	DCS instance ID.
instance_name	String	DCS instance name.

Example response

```
{
    "instances": [
        {
            "instance_id": "3c49fd6b-fc7c-419e-9644-b6cce008653f",
            "instance_name": "dcs-demo"
        }
    ],
    "instance_id": "3c49fd6b-fc7c-419e-9644-b6cce008653f"
}
```

Status Code

Table 4-7 describes the status code of successful operations. For details about other status codes, see [Table 12-1](#).

Table 4-7 Status code

Status Code	Description
200	DCS instance created successfully.

4.2 Deleting a Single DCS Instance

Function

This API is used to delete a specified DCS instance to free up all resources occupied by the DCS instance.

URI

DELETE /v1.0/{project_id}/instances/{instance_id}

Table 4-8 describes the parameter.

Table 4-8 Parameter description

Parameter	Type	Mandatory	Description
project_id	String	Yes	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .
instance_id	String	Yes	Instance ID.

Request

Request parameters

None

Example request

Request URL:

```
DELETE https://{{dcs_endpoint}}/v1.0/{{project_id}}/instances/{{instance_id}}
```

Response

Response parameters

None

Example response

None

Status Code

Table 4-9 describes the status code of successful operations. For details about other status codes, see **Table 12-1**.

Table 4-9 Status code

Status Code	Description
204	DCS instances deleted successfully.

4.3 Batch Deleting DCS Instances

Function

This API is used to delete multiple DCS instances at a time.

URI

DELETE /v1.0/{project_id}/instances?allFailure={allFailure}

Table 4-10 describes the parameters.

Table 4-10 Parameter description

Parameter	Type	Mandatory	Description
project_id	String	Yes	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .
allFailure	String	No	An indicator of whether all DCS instances failed to be created will be deleted. Options: Options: <ul style="list-style-type: none">• true: all instances that fail to be created are deleted. In this case, the instances parameter in the request can be empty.• false or other values: The DCS instances specified by the instances parameter in the API request will be deleted.

Request

Request parameters

Table 4-11 describes the request parameters.

Table 4-11 Parameter description

Parameter	Type	Mandatory	Description
instances	Array	No	IDs of DCS instances to be deleted. This parameter is set only when the allFailure parameter in the URI is set to false or another value. A maximum of 50 instances can be deleted at a time.

Request URL:

```
DELETE https://{{dcs_endpoint}}/v1.0/{{project_id}}/instances?allFailure={{allFailure}}
```

Example request with **allFailure** set to **false**:

```
{
  "instances": [
    "54602a9d-5e22-4239-9123-77e350df4a34",
    "7166cdea-dbad-4d79-9610-7163e6f8b640"
  ]
}
```

Response

Response parameters

If the value of the **allFailure** parameter in the URI is **false**, an empty response is then returned. If the value of the **allFailure** parameter in the URI is **true**, a response containing the parameter in **Table 4-12** is returned.

Table 4-12 Parameter description

Parameter	Type	Description
results	Array	For details about how to delete an instance, see Table 4-13 .

Table 4-13 results parameter description

Parameter	Type	Description
instance	String	DCS instance ID.

Parameter	Type	Description
result	String	Instance deletion result. Options: success and failed

Example response

```
{  
  "results": [  
    {  
      "instance": "54602a9d-5e22-4239-9123-77e350df4a34",  
      "result": "success"  
    },  
    {  
      "instance": "7166cdea-dbad-4d79-9610-7163e6f8b640",  
      "result": "success"  
    }  
  ]  
}
```

Status Code

[Table 4-14](#) describes the status code of successful operations. For details about other status codes, see [Table 12-1](#).

Table 4-14 Status codes

Status Code	Description
200	DCS instances deleted successfully.
204	DCS instances that failed to be created are cleared successfully.

4.4 Querying a DCS Instance

Function

This API is used to query the details about a specified DCS instance.

URI

GET /v1.0/{project_id}/instances/{instance_id}

[Table 4-15](#) describes the parameters.

Table 4-15 Parameter description

Parameter	Type	Mandatory	Description
project_id	String	Yes	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .
instance_id	String	Yes	ID of the instance to be queried

Request

Request parameters

None

Example request

Request URL:

```
GET https://{dcs_endpoint}/v1.0/{project_id}/instances/{instance_id}
```

Response

Response parameters

[Table 4-16](#) describes the response parameters.

Table 4-16 Parameter description

Parameter	Type	Description
name	String	DCS instance name.
engine	String	DCS instance engine.
capacity	Integer	DCS instance cache capacity. Unit: GB.
ip	String	IP address for connecting to the DCS instance. For a cluster instance, multiple IP addresses are returned and separated by commas (,). For example, 192.168.0.1,192.168.0.2.
domainName	String	Domain name of the instance.
port	Integer	Port number of the cache node.
status	String	Cache instance status. For details about status, see DCS Instance Statuses .

Parameter	Type	Description
libos	Boolean	<ul style="list-style-type: none"> • true: This instance is a libos instance. • false: This instance is not a libos instance.
description	String	Brief description of the DCS instance.
max_memory	Integer	Total memory size. Unit: MB.
used_memory	Integer	Size of the used memory. Unit: MB.
instance_id	String	DCS instance ID.
resource_spec_code	String	Resource specifications. For example: <ul style="list-style-type: none"> • dcs.single_node: indicates a DCS instance in single-node mode. • dcs.master_standby: indicates a DCS instance in master/standby mode. • dcs.cluster: indicates a DCS instance in cluster mode.
engine_version	String	Cache engine version.
internal_version	String	Internal DCS version.
charging_mode	Integer	Billing mode. 0 : pay-per-use.
capacity_minor	String	Cache capacity of a small-scale, single-node DCS instance.
vpc_id	String	VPC ID.
vpc_name	String	VPC name.
created_at	String	Time at which the DCS instance is created. For example, 2017-03-31T12:24:46.297Z.
error_code	String	Error code returned when the DCS instance fails to be created or is abnormal. For details about error codes, see Error Codes .
user_id	String	User ID.
user_name	String	Username.
maintain_begin	String	Time at which the maintenance time window starts. Format: hh:mm:ss.

Parameter	Type	Description
maintain_end	String	Time at which the maintenance time window ends. Format: hh:mm:ss.
no_password_access	String	An indicator of whether a DCS instance can be accessed in password-free mode. <ul style="list-style-type: none"> • true: indicates that a DCS instance can be accessed without a password. • false: indicates that a DCS instance can be accessed only after password authentication.
access_user	String	Username used for accessing a DCS instance with password authentication.
enable_publicip	Boolean	An indicator of whether public access is enabled for a DCS Redis instance. Options: <ul style="list-style-type: none"> • true: enabled. • false: disabled.
publicip_id	String	ID of the elastic IP address bound to a DCS Redis instance. The parameter value is null if public access is disabled.
publicip_address	String	Elastic IP address bound to a DCS Redis instance. The parameter value is null if public access is disabled.
enable_ssl	Boolean	An indicator of whether to enable SSL for public access to a DCS Redis instance. <ul style="list-style-type: none"> • true: enabled. • false: disabled.
service_upgrade	Boolean	An indicator of whether an upgrade task has been created for a DCS instance. <ul style="list-style-type: none"> • true: yes. • false: no.
service_task_id	String	Upgrade task ID. <ul style="list-style-type: none"> • If the value of service_upgrade is set to true, the value of this parameter is the ID of the upgrade task. • If the value of service_upgrade is set to false, the value of this parameter is empty.

Parameter	Type	Description
enterprise_project_id	String	Enterprise project ID.
product_type	String	Edition of DCS for Redis. Options: <ul style="list-style-type: none"> • generic: standard edition • libos: high-performance edition
cpu_type	String	CPU architecture. The value can be x86_64 or aarch_64 .
storage_type	String	Memory type. Options: DRAM and SCM .
cache_mode	String	DCS instance type. Options: <ul style="list-style-type: none"> • single: single-node • ha: master/standby • cluster: Redis Cluster • proxy: Proxy Cluster
launched_at	String	Time when the instance started running.
available_zones	Array	AZ where a cache node resides. The value of this parameter in the response contains an AZ ID.
subnet_id	String	Subnet ID.
security_group_id	String	Security group ID.
backend_addrs	String	Backend address of a cluster instance.
cloud_service_type_code	String	Cloud service type code.
cloud_resource_type_code	String	Cloud resource type code.
product_id	String	Product ID.
security_group_name	String	Security group name.
subnet_name	String	Subnet name.
subnet_cidr	String	Subnet segment.
order_id	String	Order ID.
instance_backup_policy	Object	Backup policy. This parameter is available for master/standby and cluster DCS instances. For details, see Table 4-17 .

Table 4-17 instance_backup_policy

Parameter	Type	Description
backup_policy_id	String	Backup policy ID.
created_at	String	Creation time.
updated_at	String	Update time.
policy	Object	For details, see Table 4-3 and Table 4-4 .
tenant_id	String	Tenant ID.

Example response

```

Status Code

Table 4-18 describes the status code of successful operations. For details about other status codes, see [Table 12-1](#).

Table 4-18 Status code

Status Code	Description
200	Specified instance queried successfully.

4.5 Querying All DCS Instances of a Tenant

Function

This API is used to query DCS instances of a tenant, and allows you to specify query criteria.

URI

GET /v1.0/{project_id}/instances?
start={start}&limit={limit}&name={name}&status={status}&id={id}&include_failure={include_failure}

Table 4-19 describes the parameters.

Table 4-19 Parameter description

Parameter	Type	Mandatory	Description
project_id	String	Yes	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .
start	Integer	No	Start number for querying DCS instances. It cannot be lower than 1. By default, the start number is 1.
limit	Integer	No	Number of DCS instances displayed on each page. Minimum value: 1 Maximum value: 2000 If this parameter is left unspecified, a maximum of 1000 DCS instances are displayed on each page.
name	String	No	DCS instance name.
id	String	No	Instance ID.
status	String	No	DCS instance status. For details about status, see DCS Instance Statuses .

Parameter	Type	Mandatory	Description
include_failure	String	No	<p>An indicator of whether the number of DCS instances that failed to be created will be returned to the API caller.</p> <p>Options:</p> <ul style="list-style-type: none"> • true: The number of DCS instances that failed to be created will be returned to the API caller. • false or others: The number of DCS instances that failed to be created will not be returned to the API caller.

Example

```
GET https://{{dcs_endpoint}}/v1.0/bd6b78e2ff9e4e47bc260803ddcc7a21/instances?  
start=1&limit=10&name=&status=&id=&include_failure=true
```

Response

Response parameters

Table 4-20 describes the response parameters.

Table 4-20 Parameter description

Parameter	Type	Description
instances	Array	Array of DCS instance details.
instance_num	Integer	Number of DCS instances.

Table 4-21 instances parameters

Parameter	Type	Description
name	String	DCS instance name.

Parameter	Type	Description
engine	String	Cache engine.
capacity	Integer	Cache capacity. Unit: GB.
ip	String	IP address for connecting to the DCS instance. For a cluster instance, multiple IP addresses are returned and separated by commas (,). For example, 192.168.0.1,192.168.0.2.
port	Integer	Port number of the cache node.
status	String	Cache instance status. For details about status, see DCS Instance Statuses .
max_memory	Integer	Overall memory size. Unit: MB.
used_memory	Integer	Size of the used memory. Unit: MB.
instance_id	String	DCS instance ID.
resource_spec_code	String	Resource specifications. For example: <ul style="list-style-type: none">• dcs.single_node: indicates a DCS instance in single-node mode.• dcs.master_standby: indicates a DCS instance in master/standby mode.• dcs.cluster: indicates a DCS instance in cluster mode.
engine_version	String	Cache engine version.
internal_version	String	Internal DCS version.
charging_mode	Integer	Billing mode. 0 : pay-per-use.
capacity_minor	String	Small-scale cache capacity. Unit: GB.
vpc_id	String	VPC ID.
vpc_name	String	VPC name.
created_at	String	Time at which the DCS instance is created. For example, 2017-03-31T12:24:46.297Z.
error_code	String	Error code returned when the DCS instance fails to be created or is abnormal. For details about error codes, see Error Codes .

Parameter	Type	Description
user_id	String	User ID.
user_name	String	Username.
maintain_begin	String	Time at which the maintenance time window starts. Format: hh:mm:ss.
maintain_end	String	Time at which the maintenance time window ends. Format: hh:mm:ss.
security_group_id	String	Security group name.

Example response

```

Table 4-22 Status code

Status Code	Description
200	All DCS instances of the tenant queried successfully.

4.6 Modifying Information About a DCS Instance

Function

This API is used to modify the information about a DCS instance, including the instance name, description, backup policy, start and end time of the maintenance window, and security group.

URI

PUT /v1.0/{project_id}/instances/{instance_id}

[Table 4-23](#) describes the parameters.

Table 4-23 Parameter description

Parameter	Type	Mandatory	Description
project_id	String	Yes	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .
instance_id	String	Yes	DCS instance ID.

Request

Request parameters

[Table 4-24](#) describes the request parameters.

Table 4-24 Parameter description

Parameter	Type	Man dato ry	Description
name	String	No	DCS instance name. An instance name can contain 4 to 64 characters, including letters, digits, underscores (_), and hyphens (-), and must start with a letter.

Parameter	Type	Man dato ry	Description
description	String	No	<p>Brief description of the DCS instance. A brief description supports up to 1024 characters.</p> <p>NOTE "\\" is defined as an escape character in the queue description. If you need to enter a backward slash (\) or a double quotation mark ("") in the queue description, enter \\ or \\".</p>
instance_backup_policy	Object	No	<p>Backup policy. This parameter is available for master/standby and cluster DCS instances. For details, see Table 4-3 and Table 4-4.</p>
maintain_begin	String	No	<p>Time at which the maintenance time window starts. Format: hh:mm:ss.</p> <ul style="list-style-type: none"> The start time and end time of the maintenance time window must indicate the time segment of a supported maintenance time window. For details on how to query the time segments of supported maintenance time windows, see Querying Maintenance Time Window. The start time must be set to 22:00:00, 02:00:00, 06:00:00, 10:00:00, 14:00:00, or 18:00: 00. Parameters maintain_begin and maintain_end must be set in pairs. If parameter maintain_begin is left blank, parameter maintain_end is also blank.

Parameter	Type	Mandatory	Description
maintain_end	String	No	<p>Time at which the maintenance time window ends.</p> <p>Format: hh:mm:ss.</p> <ul style="list-style-type: none"> The start time and end time of the maintenance time window must indicate the time segment of a supported maintenance time window. For details on how to query the time segments of supported maintenance time windows, see Querying Maintenance Time Window. The end time is four hours later than the start time. For example, if the start time is 22:00:00, the end time is 02:00:00. Parameters maintain_begin and maintain_end must be set in pairs. If parameter maintain_end is left blank, parameter maintain_start is also blank.
security_group_id	String	No	<p>Security group ID.</p> <p>The value can be obtained from the VPC console or the API.</p> <p>This parameter is supported only by DCS Redis 3.0 instances.</p>

Example request

Request URL:

```
PUT https://{dcs_endpoint}/v1.0/{project_id}/instances/{instance_id}
```

- Example 1

```
{

Status Code

Table 4-25 describes the status code of successful operations. For details about other status codes, see [Table 12-1](#).

Table 4-25 Status code

Status Code	Description
204	DCS instance modified successfully.

4.7 Scaling Up a DCS Instance

Function

This API is used to scale up a DCS Redis instance in the **Running** state.

URI

POST /v1.0/{project_id}/instances/{instance_id}/extend

Table 4-26 describes the parameters.

Table 4-26 Parameter description

Parameter	Type	Mandatory	Description
project_id	String	Yes	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .

Parameter	Type	Mandatory	Description
instance_id	String	Yes	Instance ID.

Request

Request parameters

Table 4-27 describes the request parameters.

Table 4-27 Parameter description

Parameter	Type	Mandatory	Description
new_capacity	Integer	Yes	New specification (memory space) of the DCS instance. The new specification to which the DCS instance will be scaled up must be greater than the current specification. Unit: GB. The value must be supported specifications. For details, see the Total Memory (GB) column in the "DCS Instance Specifications" section in <i>Distributed Cache Service User Guide</i> .
spec_code	String	Yes	DCS instance specification code. This parameter is optional for DCS Redis 3.0 instances. This parameter is mandatory for DCS Redis 4.0 and later instances.

Example request

- Request URL:
POST https://dcs_endpoint}/v1.0/{project_id}/instances/{instance_id}/extend
- Example:
{
 "spec_code":"redis.single.au1.large.4",
 "new_capacity":4,
}

Status Code

Table 4-28 describes the status code of successful operations. For details about other status codes, see [Table 12-1](#).

Table 4-28 Status code

Status Code	Description
204	Scale-up task submitted successfully.

5 Instance Management APIs

[Restarting DCS Instances or Clearing DCS Instance Data](#)

[Querying Statistics of All Running Instances](#)

[Querying DCS Instance Status](#)

[Changing the Password of a DCS Instance](#)

5.1 Restarting DCS Instances or Clearing DCS Instance Data

Function

This API is used to restart a running DCS instance.

Data clearance operations cannot be undone on DCS Redis 4.0 and 5.0 instances.

URI

PUT /v1.0/{project_id}/instances/status

[Table 5-1](#) describes the parameter.

Table 5-1 Parameter description

Parameter	Type	Mandatory	Description
project_id	String	Yes	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .

Request

Request parameters

Table 5-2 describes the request parameters.

Table 5-2 Parameter description

Parameter	Type	Mandatory	Description
action	String	Yes	Action performed on DCS instances. Options: restart , and flush . NOTE Only DCS Redis 4.0 and 5.0 instances can be flushed.
instances	Array	Yes	List of DCS instance IDs.

Example request

- Request URL:
PUT https://dcs_endpoint/v1.0/{project_id}/instances/status
- Example:

```
{  
    "action": "restart",  
    "instances": [  
        "2e803f66-fbb0-47ad-b6cb-fb87f5bed4ef"  
    ]  
}
```

Response

Response parameters

Table 5-3 describes the response parameter.

Table 5-3 Parameter description

Parameter	Type	Description
results	Array	Indicates the result of instance modification.

Table 5-4 results parameter description

Parameter	Type	Description
instance	String	DCS instance ID.
result	String	Instance modification result. Options: success or failed

Example response

```
{  
  "results": [  
    {  
      "result": "success",  
      "instance": "2e803f66-fbb0-47ad-b6cb-fb87f5bed4ef"  
    }  
  ]  
}
```

Status Code

Table 5-5 describes the status code of successful operations. For details about other status codes, see [Table 12-1](#).

Table 5-5 Status code

Status Code	Description
200	Successfully restarted DCS instance or cleared DCS instance data.

5.2 Querying Statistics of All Running Instances

Function

This API is used to query the statistics of all DCS instances that are in the **Running** state.

URI

GET /v1.0/{project_id}/instances/statistic

Table 5-6 describes the parameter.

Table 5-6 Parameter description

Parameter	Type	Mandatory	Description
project_id	String	Yes	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .

Request

Request parameters

None

Example request

```
GET https://{{dcs_endpoint}}/v1.0/{{project_id}}/instances/statistic
```

Response

Response parameters

Table 5-7 describes the response parameter.

Table 5-7 Parameter description

Parameter	Type	Description
statistics	Array	Statistics of all instances in the Running state. For details, see Table 5-8 .

Table 5-8 statistics parameter description

Parameter	Type	Description
keys	Integer	Number of cached data records
instance_id	String	DCS instance ID
used_memory	Integer	Size of the used memory in MB
max_memory	Integer	Overall memory size in MB
cmd_get_count	Integer	Number of times the GET command is run
cmd_set_count	Integer	Number of times the SET command is run
used_cpu	String	Percentage of CPU usage
input_kbps	String	Incoming traffic (kbit/s) of the DCS instance
output_kbps	String	Outgoing traffic (kbit/s) of the DCS instance

Example response

```
{  
    "statistics": [{  
        "keys": 0,  
        "instance_id": "e008652d-18e0-43ff-924e-072261e0372a",

            "output_kbps" : "0.0"
        }
    ]
}
```

Status Code

Table 5-9 describes the status code of successful operations. For details about other status codes, see **Table 12-1**.

Table 5-9 Status code

Status Code	Description
200	Statistics of all instances queried successfully.

5.3 Querying DCS Instance Status

Function

This API is used to query the number of instances in different states.

URI

GET /v1.0/{project_id}/instances/status?include_failure={include_failure}

Table 5-10 describes the parameters.

Table 5-10 Parameter description

Parameter	Type	Mandatory	Description
project_id	String	Yes	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .
include_failure	String	No	An indicator of whether the number of DCS instances that failed to be created will be returned to the API caller. Options: <ul style="list-style-type: none">• true: The number of DCS instances that failed to be created will be returned to the API caller.• false or others: The number of DCS instances that failed to be created will not be returned to the API caller.

Request

Request parameters

None

Example request

```
GET https://{{dcs_endpoint}}/v1.0/{{project_id}}/instances/status?include_failure=true
```

Response

Response parameters

[Table 5-11](#) describes the response parameters.

Table 5-11 Parameter description

Parameter	Type	Description
redis	StatusStatistic object	Redis instance quantity statistics.
creating_count	Integer	Number of instances that are being created.
deleting_count	Integer	Number of instances that are being deleted.

Parameter	Type	Description
running_count	Integer	Number of running instances.
error_count	Integer	Number of abnormal instances.
restarting_count	Integer	Number of instances that are being restarted.
createfailed_count	Integer	Number of instances that fail to be created.
extending_count	Integer	Number of instances that are being scaled up.
upgrading_count	Integer	Number of instances that are being upgraded.
paying_count	Integer	Number of instances for which payment is in progress.
migrating_count	Integer	Number of instances on which data migration is in progress.
flushing_count	Integer	Number of instances whose data is being cleared.
closed_count	Integer	Number of instances that have been stopped.
starting_count	Integer	Number of instances that are being started.
closing_count	Integer	Number of instances that are being stopped.
restoring_count	Integer	Number of instances for which data restoration is in progress.

Table 5-12 StatusStatistic

Parameter	Type	Description
paying_count	Integer	Number of instances for which payment is in progress.
migrating_count	Integer	Number of instances on which data migration is in progress.
flushing_count	Integer	Number of instances whose data is being cleared.
upgrading_count	Integer	Number of instances that are being upgraded.

Parameter	Type	Description
restoring_count	Integer	Number of instances for which data restoration is in progress.
extending_count	Integer	Number of instances that are being scaled up.
creating_count	Integer	Number of instances that are being created.
running_count	Integer	Number of running instances.
error_count	Integer	Number of abnormal instances.
createfailed_count	Integer	Number of instances that fail to be created.
restarting_count	Integer	Number of instances that are being restarted.

Status code: 400

Table 5-13 Response body parameters

Parameter	Type	Description
error_msg	String	Error message. Maximum length: 1024 characters
error_code	String	Error code. Maximum length: 9 characters
error_ext_msg	String	Extended error information. This parameter is not used currently and is set to null. Maximum length: 1024 characters

Status code: 500

Table 5-14 Response body parameters

Parameter	Type	Description
error_msg	String	Error message. Maximum length: 1024 characters
error_code	String	Error code. Maximum length: 9 characters

Parameter	Type	Description
error_ext_msg	String	Extended error information. This parameter is not used currently and is set to null. Maximum length: 1024 characters

Example response

```
{
  "paying_count":0,
  "migrating_count":0,
  "error_count":0,
  "restarting_count":0,

}
```

Status Code

Table 5-15 describes the status code of successful operations. For details about other status codes, see [Table 12-1](#).

Table 5-15 Status code

Status Code	Description
200	Quantities of DCS instances in different statuses queried successfully.
400	The request is invalid.
500	Internal service error.

5.4 Changing the Password of a DCS Instance

Function

This API is used to change the password of a DCS instance.

URI

PUT /v1.0/{project_id}/instances/{instance_id}/password

[Table 5-16](#) describes the parameters.

Table 5-16 Parameter description

Parameter	Type	Mandatory	Description
project_id	String	Yes	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .
instance_id	String	Yes	DCS instance ID.

Request

Request parameters

[Table 5-17](#) describes the request parameters.

Table 5-17 Parameter description

Parameter	Type	Mandatory	Description
old_password	String	Yes	Old password.

Parameter	Type	Mandatory	Description
new_password	String	Yes	<p>New password.</p> <p>Password complexity requirements:</p> <ul style="list-style-type: none"> • Cannot be empty. • Cannot be the username or the username spelled backwards. • Can contain 8 to 64 characters. • Contain at least three of the following character types: <ul style="list-style-type: none"> - Lowercase letters - Uppercase letters - Digits - Special characters (`~!@#\$^&*()_-=_\ {};,<.>/?)

Example request

- Request URL:
PUT https://[dcs_endpoint]/v1.0/{project_id}/instances/{instance_id}/password
- Example:

```
{
  "old_password": "XXXXXX",
  "new_password": "XXXXXX"
}
```

Response

Response parameters

Table 5-18 describes the response parameters.

Table 5-18 Parameter description

Parameter	Type	Description
result	String	An indicator of whether the password is successfully changed: Options: <ul style="list-style-type: none"> ● Success: Password changed successfully. ● passwordFailed: The old password is incorrect. ● Locked: This account has been locked. ● Failed: Failed to change the password.
message	String	Result of password change.
retry_times_left	String	Number of remaining password attempts. If the old password is incorrect, the value of this parameter is not null .

Parameter	Type	Description
lock_time	String	Account lockout duration. If the old password is incorrect or the account is locked, the value of this parameter is not null .
lock_time_left	String	Remaining time before the account is unlocked. If the account is locked, the value of this parameter is not null .

Example response

```
//Change password success.
{
    "result" : "Success",
    "message" : "Modify DCSInstance password success.",
    "retry_times_left" : "5",
    "lock_time" : "0",
    "lock_time_left" : "0"
}
//Change password failed.
{
    "result" : "passwordFailed",
    "message" : "verify password failed.",
    "retry_times_left" : "4",
    "lock_time" : "5",
    "lock_time_left" : "5"
}
```

Status Code

Table 5-19 describes the status code of successful operations. For details about other status codes, see [Table 12-1](#).

Table 5-19 Status code

Status Code	Description
200	Password changed successfully.

6 Parameter Management APIs

[Modifying Configuration Parameters](#)

[Querying Configuration Parameters](#)

6.1 Modifying Configuration Parameters

Function

You can modify the configuration parameters of your DCS instance to optimize DCS performance based on your requirements.

URI

PUT /v1.0/{project_id}/instances/{instance_id}/configs

[Table 6-1](#) describes the parameters.

Table 6-1 Parameter description

Parameter	Type	Mandatory	Description
project_id	String	Yes	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .
instance_id	String	Yes	ID of the instance to be modified.

Request

Request parameters

[Table 6-2](#) describes the request parameters.

Table 6-2 Parameter description

Parameter	Type	Mandatory	Description
redis_config	Array	Yes	Array of configuration items of the DCS instance.

Table 6-3 redis_config parameter description

Parameter	Type	Mandatory	Description
param_id	String	Yes	Configuration item ID.
param_name	String	Yes	Configuration item name.
param_value	String	Yes	Value of the configuration item.

For possible values of parameters in [Table 6-3](#), see [Table 6-8](#).

Example request

- Request URL:
PUT https://[{dcs_endpoint}](#)/v1.0/[{project_id}](#)/instances/[{instance_id}](#)/configs
- Example:

```
{  
    "redis_config": [  
        {  
            "param_id": "1",  
            "param_name": "timeout",  
            "param_value": "100"  
        }  
    ]  
}
```

Response

Response parameters

None

Example response

None

Status Code

[Table 6-4](#) describes the status code of successful operations. For details about other status codes, see [Table 12-1](#).

Table 6-4 Status code

Status Code	Description
204	DCS instance configurations modified successfully.

6.2 Querying Configuration Parameters

Function

This API is used to query the configuration parameters of a DCS instance.

URI

GET /v1.0/{project_id}/instances/{instance_id}/configs

Table 6-5 describes the parameters.

Table 6-5 Parameter description

Parameter	Type	Mandatory	Description
project_id	String	Yes	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .
instance_id	String	Yes	ID of the instance to be queried.

Request

Request parameters

None

Example request

GET https://{dcs_endpoint}/v1.0/{project_id}/instances/{instance_id}/configs

Response

Response parameters

Table 6-6 describes the response parameters.

Table 6-6 Parameter description

Parameter	Type	Description
status	String	Current status of a DCS instance.
instance_id	String	DCS instance ID.
redis_config	Array	Array of configuration items of the DCS instance. For details, see Table 6-7 .
config_status	String	DCS instance status that is being modified or has been modified. Options: <ul style="list-style-type: none"> • UPDATING • FAILURE • SUCCESS
config_time	String	Time at which the DCS instance is operated on. For example, 2017-03-31T12:24:46.297Z.
cluster_v1	Boolean	Instance type. If true is returned, the instance is a Proxy Cluster DCS Redis 3.0 instance. If false is returned, the instance is not a Proxy Cluster DCS Redis 3.0 instance.

Table 6-7 redis_config parameter description

Parameter	Type	Description
description	String	Configuration item description.
param_id	String	Configuration parameter ID. For the possible values, see the Parameter ID column in Table 6-8 .
param_name	String	Configuration parameter name. For the possible values, see the Parameter Name column in Table 6-8 .
param_value	String	Configuration parameter value.
default_value	String	Default value of the configuration parameter. For the possible values, see the Default Value column in Table 6-8 .
value_type	String	Type of the configuration parameter value. For the possible values, see the Value Type column in Table 6-8 .
value_range	String	Range of the configuration parameter value. For the possible values, see the Value Range column in Table 6-8 .

Parameter	Type	Description
node_role	String	If null or empty is returned, the node is a default node, that is, the Redis Server node. If proxy is returned, the node is a proxy node.

Table 6-8 describes the configuration parameters of a DCS instance.

Table 6-8 Configuration parameters of a DCS instance

Parameter ID	Parameter Name	Type	Description	Value Range	Default Value
1	timeout	Integer	Connection between the client and server (DCS instance) will be closed if the client is idle for the timeout period (measured in seconds). A timeout period of 0 seconds indicates that the timeout function is disabled.	0–7200 seconds	0

Parameter ID	Parameter Name	Type	Description	Value Range	Default Value
2	maxmemory-policy	String	How Redis will select what to remove when maxmemory is reached. For details about key eviction, see the Redis official website .	volatile-lru allkeys-lru volatile-random allkeys-random volatile-ttl noeviction volatile-lfu allkeys-lfu	noeviction or volatile-lru The value range and default value depend on the instance version and type.
3	hash-max-ziplist-entries	Integer	When the number of entries in hashes is less than the value of this parameter, hashes are encoded using ziplist to save memory.	1-10,000	512
4	hash-max-ziplist-value	Integer	When the biggest entry in hashes does not exceed the length threshold indicated by this parameter, hashes are encoded using ziplist to save memory.	1-10,000	64
5	list-max-ziplist-entries	Integer	When the number of entries in lists is less than the value of this parameter, lists are encoded using ziplist to save memory.	1-10,000	512

Parameter ID	Parameter Name	Type	Description	Value Range	Default Value
6	list-max-ziplist-value	Integer	When the biggest entry in lists does not exceed the length threshold indicated by this parameter, lists are encoded using ziplist to save memory.	1-10,000	64
7	set-max-intset-entries	Integer	When a set is composed entirely of strings and the number of integers does not exceed the length threshold indicated by this parameter, the set is encoded using intset to save memory.	1-10,000	512
8	zset-max-ziplist-entries	Integer	When the number of entries in sorted sets is less than the value of this parameter, sorted sets are encoded using a memory efficient data structure.	1-10,000	128
9	zset-max-ziplist-value	Integer	When the biggest entry in sorted sets does not exceed the length threshold indicated by this parameter, sorted sets are encoded using ziplist to save memory.	1-10,000	64

Parameter ID	Parameter Name	Type	Description	Value Range	Default Value
10	latency-monitor-threshold	Integer Integer	<p>The minimum amount of latency that will be logged as latency spikes</p> <p>If this parameter is set to 0, latency monitoring is disabled. If this parameter is set to a value greater than 0, all events blocking the server for a time greater than the configured value will be logged.</p> <p>By running the LATENCY command, you can perform operations related to latency monitoring, such as obtaining statistical data, and configuring and enabling latency monitoring. For more information about the latency-monitor-threshold, visit the Redis official website.</p>	0–86,400,000 ms	0
11	maxclients	Integer	The maximum number of clients allowed to be concurrently connected to a DCS instance.	1000–50,000	10,000

Parameter ID	Parameter Name	Type	Description	Value Range	Default Value
12	reserved - memory	Integer	<p>Reserved memory, which is the number of megabytes reserved for the backend to perform internal processing such as persistence and master/standby replication.</p> <p>This parameter is available only for master/standby instances.</p> <p>The size of the reserved memory can be adjusted, but must be in the value range described in the next column. For more information about maximum available memory of each instance type, see <i>Distributed Cache Service User Guide</i>.</p>	<p>0% to 50% of maximum memory space initially available to the instance and below the current free memory space. Unit: MB.</p>	0

Parameter ID	Parameter Name	Type	Description	Value Range	Default Value
13	notify-keyspace-events	String	Keyspace event notification. If this parameter is configured, the Redis Sub/Pub feature will allow clients to receive an event when a Redis data set is modified.	If the parameter value contains multiple characters, keyspace event notification is enabled and each character identifies a class of keyspace events for which Redis will send notifications. K: Keyspace events, published with the __keyspace@__ prefix E: Keyevent events, published with the __keyevent@__ prefix g: Generic commands (non-type specific) such as DEL, EXPIRE, and RENAME \$: String commands l: List commands s: Set commands h: Hash commands z: Sorted set commands	Ex

Parameter ID	Parameter Name	Type	Description	Value Range	Default Value
			x: Expired events (events generated every time a key expires) e: Evicted events (events generated when a key is evicted for maxmemory) For more information, see the following note.		
14	repl-backlog-size	Integer	The replication backlog size in bytes. The backlog is a buffer that accumulates replica data when replicas are disconnected from the master. When a replica reconnects, a partial synchronization is performed to synchronize the data that was missed while replicas were disconnected.	16,384–1,073,741,824	1,048,576
15	repl-backlog-ttl	Integer	The amount of time, in seconds, before the backlog buffer is released, starting from the last a replica was disconnected. The value 0 indicates that the backlog is never released.	0–604,800	3600

Parameter ID	Parameter Name	Type	Description	Value Range	Default Value
16	appendfsync	String	Controls how often <code>fsync()</code> transfers cached data to the disk. Note that some OSs will perform a complete data transfer but some others only make a "best-effort" attempt.	Redis calls <code>fsync()</code> in one of the following ways: no : <code>fsync()</code> is never called. The OS will flush data when it is ready. This mode offers the highest performance. always : <code>fsync()</code> is called after every write to the AOF. This mode is very slow, but also very safe. everysec : <code>fsync()</code> is called once per second. This mode provides a compromise between safety and performance.	everysec
17	appendonly	String	Indicates whether to log each modification of the instance. By default, data is written to disks asynchronously in Redis. If this function is disabled, recently-generated data might be lost in the event of a power failure.	yes,no	yes

Parameter ID	Parameter Name	Type	Description	Value Range	Default Value
18	slowlog-log-slower-than	Integer	Redis uses the slow log to record queries that exceed a specified execution time. slowlog-log-slower-than is the maximum time allowed, in microseconds, for command execution. If this threshold is exceeded, Slow Log will record the command.	0–1,000,000	10,000
19	slowlog-max-len	Integer	The maximum allowed length of the Redis Slow Log logs. Slow Log consumes memory, but you can reclaim this memory by running the SLOWLOG RESET command.	0–1000	128
20	lua-time-limit	Integer	The maximum time allowed for executing a Lua script, in milliseconds.	100–5000	5000
21	repl-timeout	Integer	Replication timeout, in seconds.	30–3600	60
22	proto-max-bulk-len	Integer	The maximum size (in bytes) of a single element request.	1,048,576–536,870,912	536,870,912
23	master-read-only	String	Sets the instance to be read-only. All write operations will fail.	yes,no	no
24	client-output-buffer-slave-soft-limit	Integer	Soft limit (in bytes) on the output buffer of replica clients. Once the output buffer exceeds the soft limit and continuously remains above the limit for the time specified by the client-output-buffer-limit-slave-soft-seconds parameter, the client is disconnected.	0–134,217,728	13,421,772

Parameter ID	Parameter Name	Type	Description	Value Range	Default Value
25	client-output-buffer-slave-hard-limit	Integer	Hard limit (in bytes) on the output buffer of replica clients. Once the output buffer exceeds the hard limit, the client is immediately disconnected.	0-134,217,728	13,421,772
26	client-output-buffer-limit-slave-soft-seconds	Integer	Number of seconds that the output buffer remains above client-output-buffer-slave-soft-limit before the client is disconnected.	0-60	60
30	reserved - memory-percent	Integer	Percentage of memory reserved for non-cache memory usage.	0-80	0

NOTE

More about the **notify-keyspace-events** parameter:

- Allowed characters are K, E, KE, A, g, l, s, h, z, x, e, and \$. The parameter value must contain either **K** or **E**.
- **A** is an alias for **g\$lshzxe** and cannot be used together with any of the characters in **g \$lshzxe**.
- For example, the value **KL** means that Redis will notify Pub/Sub clients about keyspace events and list commands. The value **AKE** means Redis will notify Pub/Sub clients about all events.

Example response

```
{

200	Instance configurations queried successfully.

7 Data Migration APIs

[Creating a Data Migration Task](#)

7.1 Creating a Data Migration Task

Function

This API is used to create a data migration task.

Constraints

None

URI

POST /v2/{project_id}/migration-task

Table 7-1 URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .

Request

Table 7-2 Request body parameter description

Parameter	Mandatory	Type	Description
task_name	Yes	String	Name of the migration task.
description	No	String	Description of the migration task.
migration_type	Yes	String	Mode of the migration. Options: <ul style="list-style-type: none">• backupfile_import: indicates importing backup files.• online_migration: indicates migrating data online.
migration_method	Yes	String	Type of the migration. Options: <ul style="list-style-type: none">• full_amount_migration: indicates a full migration.• incremental_migration: indicates an incremental migration.
backup_files	No	BackupFilesBody Object	Backup files to be imported when the migration mode is importing backup files.
network_type	No	String	Type of the network for communication between the source and destination Redis when the migration mode is online data migration. Options: <ul style="list-style-type: none">• vpc• vpn
source_instance	No	SourceInstanceBody Object	Source Redis information. This parameter is mandatory when the migration mode is online data migration.
target_instance	Yes	TargetInstanceBody Object	Destination Redis instance information.

Table 7-3 BackupFilesBody

Parameter	Mandatory	Type	Description
file_source	No	String	Data source. Currently, only OBS buckets are supported. The value is self_build_obs .
bucket_name	Yes	String	OBS bucket name.
files	Yes	Array of Files Objects	List of backup files to be imported.

Table 7-4 Files

Parameter	Mandatory	Type	Description
file_name	Yes	String	Name of a backup file.
size	No	String	File size in bytes.
update_at	No	String	Time when the file is last modified. The format is YYYY-MM-DD HH:MM:SS.

Table 7-5 SourceInstanceBody

Parameter	Mandatory	Type	Description
addrs	Yes	String	Source Redis name (specified in the source_instance parameter).
password	No	String	Redis password. If a password is set, this parameter is mandatory.

Table 7-6 TargetInstanceBody

Parameter	Mandatory	Type	Description
id	Yes	String	Destination Redis instance ID (mandatory in the target_instance parameter).

Parameter	Mandatory	Type	Description
name	No	String	Destination Redis instance name (specified in the target_instance parameter).
password	No	String	Redis password. If a password is set, this parameter is mandatory.

Response

If the status code is 200, the following parameters are returned:

Table 7-7 Parameter description

Parameter	Type	Description
id	String	ID of the migration task.
name	String	Name of the migration task.
status	String	Migration task status. The value can be: <ul style="list-style-type: none">• SUCCESS: Migration succeeded.• FAILED: Migration failed.• MIGRATING: Migration is in progress.• TERMINATED: Migration has been stopped.• TERMINATING: Migration is being stopped.• RUNNING: The migration task has been created and is waiting to be executed.• CREATING: The migration task is being created.• FULLMIGRATING: Full migration is in progress.• INCRMIGEATING: Incremental migration is in progress.• ERROR: faulty• DELETED: faulty• RELEASED: automatically released• MIGRATION_SUCCESS: The migration is successful, and resources are to be cleared.• MIGRATION_FAILED: The migration failed, and resources are to be cleared.

Example Request

- Example request URL:
POST https://{{dcs_endpoint}}/v2/{{project_id}}/migration-task
- Example request 1 (online migration)

```
{  
    "task_name": "lmd-test",  
    "description": "Test",  
    "migration_type": "online_migration",  
    "migration_method": "full_amount_migration",  
    "network_type": "vpc",  
    "source_instance": {  
        "addrs": "192.168.1.135:6379",  
        "password": "xxxxxx"  
    },  
    "target_instance": {  
        "name": "dcs-test",  
        "id": "4cd5dbb8-aacd-4603-b817-3e97d48c7a20"  
    }  
}
```
- Example request 2 (importing a backup file)

```
{  
    "backup_files": {  
        "bucket_name": "bucket-lmz",  
        "file_source": "self_build_obs",  

```

Example Response

If the status code is 200, the data migration task is successfully created.

```
{  
    "id": "8aa6999e71cb638b0171f485f5266ef0",  
    "name": "lmd-test",  
    "status": "MIGRATING"  
}
```

Status Code

Status Code	Description
200	Data migration task created successfully.
400	Invalid request.
500	Internal service error.

Error Codes

For details, see [Error Codes](#).

8 Backup and Restoration APIs

- [Backing Up a DCS Instance](#)
- [Restoring a DCS Instance](#)
- [Querying DCS Instance Backup Records](#)
- [Querying DCS Instance Restoration Records](#)
- [Deleting Backup Files](#)

8.1 Backing Up a DCS Instance

Function

This API is used to back up a specified DCS instance.

NOTE

Only master/standby and cluster DCS instances can be backed up and restored, while single-node instances cannot.

URI

POST /v1.0/{project_id}/instances/{instance_id}/backups

[Table 8-1](#) describes the parameters.

Table 8-1 Parameter description

Parameter	Type	Mandatory	Description
project_id	String	Yes	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .

Parameter	Type	Mandatory	Description
instance_id	String	Yes	DCS instance ID.

Request

Request parameters

Table 8-2 describes the request parameters.

Table 8-2 Parameter description

Parameter	Type	Mandatory	Description
remark	String	No	Description of DCS instance backup.

Example request

- Request URL:
POST https://{{dcs_endpoint}}/v1.0/{{project_id}}/instances/{{instance_id}}/backups
- Example:
{
 "remark": "Backup instances"
}

Response

Response parameters

Table 8-3 describes the response parameter.

Table 8-3 Parameter description

Parameter	Type	Description
backup_id	String	ID of the backup record

Example response

```
{  
  "backup_id": "548ceeff-2cbb-47ab-9a1c-7b085a8c08d7"  
}
```

Status Code

Table 8-4 describes the status code of successful operations. For details about other status codes, see **Table 12-1**.

Table 8-4 Status code

Status Code	Description
200	Backup task created successfully.

8.2 Restoring a DCS Instance

Function

This API is used to restore a specified DCS instance.

Only master/standby and cluster DCS instances can be backed up and restored, while single-node instances cannot.

URI

POST /v1.0/{project_id}/instances/{instance_id}/restores

Table 8-5 describes the parameters.

Table 8-5 Parameter description

Parameter	Type	Mandatory	Description
project_id	String	Yes	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .
instance_id	String	Yes	DCS instance ID.

Request

Request parameters

Table 8-6 describes the request parameters.

Table 8-6 Parameter description

Parameter	Type	Mandatory	Description
remark	String	No	Description of DCS instance restoration
backup_id	String	Yes	ID of the backup record

Example request

Request URL:

```
POST https://[dcs_endpoint]/v1.0/{project_id}/instances/{instance_id}/restores
```

Example:

```
{  
    "remark": "restore instance",  
    "backup_id": "8ba256cb-e5ac-44f6-a3da-c03d8f0e5029"  
}
```

Response

Response parameters

[Table 8-7](#) describes the response parameter.

Table 8-7 Parameter description

Parameter	Type	Description
restore_id	String	ID of the restoration record

Example response

```
{  
    "restore_id": "a6155972-800c-4170-a479-3231e907d2f6"  
}
```

Status Code

[Table 8-8](#) describes the status code of successful operations. For details about other status codes, see [Table 12-1](#).

Table 8-8 Status code

Status Code	Description
200	Restoration task created successfully.

8.3 Querying DCS Instance Backup Records

Function

This API is used to query the backup records of a specified DCS instance.

URI

GET /v1.0/{project_id}/instances/{instance_id}/backups?
start={start}&limit={limit}&beginTime={beginTime}&endTime={endTime}

Table 8-9 describes the parameters.

Table 8-9 Parameter description

Parameter	Type	Mandatory	Description
project_id	String	Yes	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .
instance_id	String	Yes	DCS instance ID.
start	Integer	No	Start sequence number of the backup record that is to be queried. By default, this parameter is set to 1 .
limit	Integer	No	Number of backup records displayed on each page. The minimum value of this parameter is 1 . If this parameter is not set, 10 backup records are displayed on each page by default.
beginTime	String	No	Start time of the period to be queried. Format: yyyyMMddHHmmss, for example, 20170718235959.
endTime	String	No	End time of the period to be queried. Format: yyyyMMddHHmmss, for example, 20170718235959.

Request

Request parameters

None

Example request

```
GET https://{{dcs_endpoint}}/v1.0/{{project_id}}/instances/{{instance_id}}/backups?  
start={start}&limit={limit}&beginTime={beginTime}&endTime={endTime}
```

Response

Response parameters

Table 8-10 describes the response parameters.

Table 8-10 Parameter description

Parameter	Type	Description
backup_record_response	Array	Array of the backup records. For details about backup_record_response, see Table 8-11 .
total_num	Integer	Number of obtained backup records.

Table 8-11 backup_record_response parameter description

Parameter	Type	Description
status	String	Backup status. Options: <ul style="list-style-type: none">• waiting: DCS instance restoration is waiting to begin.• backingup: DCS instance backup is in progress.• succeed: DCS instance backup succeeded.• failed: DCS instance backup failed.• expired: The backup file expires.• deleted: The backup file has been deleted manually.
remark	String	Description of DCS instance backup
period	String	Time segment in which DCS instance backup was performed
progress	String	Backup progress
size	Long	Size of the backup file. Unit: byte.
instance_id	String	DCS instance ID
backup_id	String	ID of the backup record
created_at	String	Time at which the backup task is created
updated_at	String	Time at which DCS instance backup is completed
execution_at	String	Time at which the backup starts.
backup_type	String	Backup type. Options: <ul style="list-style-type: none">• manual: manual backup• auto: automatic backup
backup_name	String	Name of the backup record
error_code	String	Error code returned if DCS instance backup fails. For details about error codes, see Table 8-12 .

Parameter	Type	Description
is_support_restore	String	An indicator of whether restoration is supported. Options: TRUE or FALSE .

Table 8-12 Error codes returned in case of a backup or restoration failure

Error Code	Description
dcs.08.0001	Failed to start the backup and restore tool.
dcs.08.0002	Operation timed out.
dcs.08.0003	Failed to delete bucket.
dcs.08.0004	Failed to obtain AK/SK.
dcs.08.0005	Failed to create bucket.
dcs.08.0006	Failed to obtain backup file size.
dcs.08.0007	Data synchronization failed during instance restoration.
dcs.08.0008	Automatic backup of the instance cannot start because the instance is running other jobs.

Example response

```
{
  "backup_record_response": [
    {
      "status": "succeed",
      "remark": "001",
      "period": null,
      "progress": "100.00",
      "size": 880232,
      "instance_id": "5560df16-cebf-4473-95c4-d1b573c16e79",
      "backup_id": "4631832a-14c6-45b0-a0b3-3abd8f591ad1",
      "created_at": "2019-05-10T08:31:16.166Z",

      "execution_at": "2019-05-10T08:31:21.461Z",
      "backup_type": "manual",

      "backup_name": "backup_20190510163116",
      "error_code": null,
      "is_support_restore": "TRUE"
    }
  ],
  "total_num": 1
}
```

Status Code

Table 8-13 describes the status code of successful operations. For details about other status codes, see [Table 12-1](#).

Table 8-13 Status code

Status Code	Description
200	DCS instance backup records queried successfully.

8.4 Querying DCS Instance Restoration Records

Function

This API is used to query the restoration records of a specified DCS instance.

URI

GET /v1.0/{project_id}/instances/{instance_id}/restores?
start={start}&limit={limit}&beginTime={beginTime}&endTime={endTime}

[Table 8-14](#) describes the parameters.

Table 8-14 Parameter description

Parameter	Type	Mandatory	Description
project_id	String	Yes	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .
instance_id	String	Yes	DCS instance ID.
start	Integer	No	Start sequence number of the restoration record to be queried. By default, this parameter is set to 1.
limit	Integer	No	Number of restoration records displayed on each page. The minimum value of this parameter is 1. If this parameter is not specified, 10 restoration records are displayed on each page by default.
beginTime	String	No	Start time of the period to be queried. Format: yyyyMMddHHmmss, for example, 20170718235959.
endTime	String	No	End time of the period to be queried. Format: yyyyMMddHHmmss, for example, 20170718235959.

Request

Request parameters

None

Example request

```
GET https://{{dcs_endpoint}}/v1.0/{{project_id}}/instances/{{instance_id}}/restores?  
start={{start}}&limit={{limit}}&beginTime={{beginTime}}&endTime={{endTime}}
```

Response

Response parameters

[Table 8-15](#) describes the response parameters.

Table 8-15 Parameter description

Parameter	Type	Description
restore_record_response	Array	Array of the restoration records.
total_num	Integer	Number of obtained backup records.

Table 8-16 restore_record_response parameter description

Parameter	Type	Description
status	String	Restoration status <ul style="list-style-type: none">waiting: DCS instance restoration is waiting to begin.restoring: DCS instance restoration is in progress.succeed: DCS instance restoration succeeded.failed: DCS instance restoration failed.
progress	String	Restoration progress
restore_id	String	ID of the restoration record
backup_id	String	ID of the backup record
restore_remark	String	Description of DCS instance restoration
backup_remark	String	Description of DCS instance backup
created_at	String	Time at which the restoration task is created

Parameter	Type	Description
updated_at	String	Time at which DCS instance restoration completed
restore_name	String	Name of the restoration record
backup_name	String	Name of the backup record
error_code	String	Error code returned if DCS instance restoration fails. For details about error codes, see Table 8-12 .

Example response

```
{
  "restore_record_response": [
    {
      "status": "succeed",
      "progress": "100.00",
      "restore_id": "a6155972-800c-4170-a479-3231e907d2f6",
      "backup_id": "f4823e9e-fe9b-4ffd-be79-4e5d6de272bb",
      "restore_remark": "doctest",
      "backup_remark": null,

      "sourceInstanceName": "Test-DCS-MS-3-f79a983f",
      "error_code": null
    }
  ],
  "total_num": 1
}
```

Status Code

[Table 8-17](#) describes the status code of successful operations. For details about other status codes, see [Table 12-1](#).

Table 8-17 Status code

Status Code	Description
200	DCS instance restoration record queried successfully.

8.5 Deleting Backup Files

Function

This API is used to delete the files backed up by a DCS instance.

URI

DELETE /v1.0/{project_id}/instances/{instance_id}/backups/{backup_id}

Table 8-18 describes the parameters.

Table 8-18 Parameter description

Parameter	Type	Mandatory	Description
project_id	String	Yes	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .
instance_id	String	Yes	DCS instance ID
backup_id	String	Yes	ID of the backup record

Request

Request parameters

None

Example request

Request URL:

```
DELETE https://{{dcs_endpoint}}/v1.0/{{project_id}}/instances/{{instance_id}}/backups/{{backup_id}}
```

Response

Response parameters

Table 8-19 describes the response parameters.

Table 8-19 Parameter description

Parameter	Type	Description
message	String	Result of deleting the backup file

Example response

```
{  
  "message": ""  
}
```

Status Code

Table 8-20 describes the status code of successful operations. For details about other status codes, see **Table 12-1**.

Table 8-20 Status code

Status Code	Description
200	Backup file deleted successfully.

9 Tag Management APIs

- [Querying All Tags of a Tenant V1](#)
- [Adding or Deleting Tags in Batches V1](#)
- [Querying Tag of a Specified Instance V1](#)
- [Querying All Tags of a Tenant V2](#)
- [Adding or Deleting Tags in Batches V2](#)
- [Querying Tags of a Specified Instance V2](#)

9.1 Querying All Tags of a Tenant V1

Function

This API is used to query the tags of all resources owned by a tenant in a specified project.

URI

GET /v1.0/{project_id}/dcs/tags

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .

Request

None

Response

When the status code is **200**, the response parameters are as follows.

Parameter	Type	Description
key	String	Tag key, which <ul style="list-style-type: none">Contains a maximum of 36 Unicode characters.
values	Array of strings	Tag value, which <ul style="list-style-type: none">Contains a maximum of 43 Unicode characters.Can be an empty string.

Example response

```
{  
  "tags": [  
    {  
      "key": "001",  
      "values": [  
        "002"  
      ]  
    },  
    {  
      "key": "003",  
      "values": [  
        "004"  
      ]  
    }  
  ]  
}
```

Return Value

Return Value	Description
200	Successfully queried all tags of a tenant.

Error Codes

None

9.2 Adding or Deleting Tags in Batches V1

Function

This API is used to add or delete tags in batches for a DCS instance.

URI

POST /v1.0/{project_id}/dcs/{instance_id}/tags/action

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .
instance_id	Yes	String	Instance ID.

Example

Post https://dcs_endpoint/v1.0/{project_id}/dcs/{instance_id}/tags/action

Request

Request parameters

Table 9-1 Request

Parameter	Mandatory	Type	Description
action	Yes	String	Operation to be performed. The value can be create or delete only.
tags	Yes	Array of Objects	List of tags. For details, see Table 9-2 .

Table 9-2 tags parameters

Parameter	Mandatory	Type	Description
key	Yes	String	Tag key, which <ul style="list-style-type: none"> • Cannot be left blank. • Must be unique. • Can contain a maximum of 36 characters.

Parameter	Mandatory	Type	Description
value	No	String	<p>Tag value, which</p> <ul style="list-style-type: none"> Is mandatory when action is set to create and optional when action is set to delete. Can contain a maximum of 43 characters.

Example request

```
{
  "action": "create",
  "tags": [
    {
      "key": "dcs001",
      "value": "002"
    },
    {
      "key": "dcs003",
      "value": "004"
    }
  ]
}
```

Response parameters

None

Return Value

Return Value	Description
200	Tags added/deleted successfully.

Error Codes

None

9.3 Querying Tag of a Specified Instance V1

Function

This API is used to query the tags of an instance by its instance ID.

URI

GET /v1.0/{project_id}/instances/{instance_id}/tags

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .
instance_id	Yes	String	Instance ID.

Request

None

Response

When the status code is **200**, the response parameters are as follows.

Table 9-3 Parameter description

Parameter	Type	Description
tags	Array of Objects	List of tags. For details, see Table 9-4 .

Table 9-4 tags parameters

Parameter	Type	Description
key	String	Tag key, which <ul style="list-style-type: none"> • Cannot be left blank. • Must be unique. • Can contain a maximum of 36 characters.
value	String	Tag value, which <ul style="list-style-type: none"> • Can contain a maximum of 43 characters. • Can be an empty string.

Example response

When the status code is **200**, the response parameters are as follows.

```
{
  "tags": [
    {
      "key": "001",
      "value": "002"
    },
    {
      "key": "003",
      "value": "004"
    }
  ]
}
```

```
        "key": "003",
        "value": "004"
    }
}
```

Return Value

Return Value	Description
200	Instance tags queried successfully.

Error Codes

None

9.4 Querying All Tags of a Tenant V2

Function

This API is used to query the tags of all resources owned by a tenant in a specified project.

URI

GET /v2/{project_id}/dcs/tags

Table 9-5 URI parameter

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .

Request

None

Response

Example response with status code **200**:

Table 9-6 Response body parameter

Parameter	Type	Description
tags	Array of Tag Objects	List of tags.

Table 9-7 Tag

Parameter	Type	Description
key	String	Tag key, which can contain a maximum of 36 Unicode characters.
values	Array of strings	Tag value.

Example Request

```
POST https://{{dcs_endpoint}}/v2/{{project_id}}/dcs/tags
```

Example Response

Example response with status code **200**:

Successfully queried all tags of a tenant.

```
{
  "tags": [
    {
      "value": ["value1", "value2"],
      "key": 1
    },
    {
      "value": ["value1", "value2"],
      "key": 2
    }
  ]
}
```

Status Code

Status Code	Description
200	Successfully queried all tags of a tenant.
400	The request is invalid.
500	Internal service error.

Error Code

See [Error Codes](#).

9.5 Adding or Deleting Tags in Batches V2

Function

This API is used to add or delete tags in batches for a DCS instance.

URI

POST /v2/{project_id}/dcs/{instance_id}/tags/action

Table 9-8 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .
instance_id	Yes	String	Instance ID.

Request

Table 9-9 Request body parameter description

Parameter	Mandatory	Type	Description
action	Yes	String	Operation to be performed. The value can be create or delete only.
tags	No	Array of ResourceTag Objects	List of tags.

Table 9-10 ResourceTag

Parameter	Mandatory	Type	Description
key	Yes	String	Tag key, which: <ul style="list-style-type: none">• Cannot be left blank.• Must be unique.• Can contain a maximum of 36 characters.

Parameter	Mandatory	Type	Description
value	No	String	Tag value, which: <ul style="list-style-type: none">• Is mandatory when action is set to create and optional when action is set to delete.• Can contain a maximum of 43 characters.

Response

None

Example Request

```
POST https://{{dcs_endpoint}}/v2/7dddae81f0e34f62adb9618bc8c8b1fe/dcs/  
01928d55-7020-4500-9c29-774caabe4bc4/tags/action
```

Example Response

None

Status Code

Status Code	Description
204	Tags added/deleted successfully.

Error Code

See [Error Codes](#).

9.6 Querying Tags of a Specified Instance V2

Function

This API is used to query the tags of an instance by its instance ID.

URI

GET /v2/{project_id}/instances/{instance_id}/tags

Table 9-11 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details on how to obtain the value of this parameter, see Obtaining a Project ID .
instance_id	Yes	String	Instance ID.

Request

None

Response

Example response with status code **200**:

Table 9-12 Response body parameter

Parameter	Type	Description
tags	Array of ResourceTag Objects	List of tags.

Table 9-13 ResourceTag

Parameter	Type	Description
key	String	Tag key, which: <ul style="list-style-type: none"> • Cannot be left blank. • Must be unique. • Can contain a maximum of 36 characters.
value	String	Tag value, which: <ul style="list-style-type: none"> • Is mandatory when action is set to create and optional when action is set to delete. • Can contain a maximum of 43 characters.

Example Request

```
POST https://dcs_endpoint/v2/{project_id}/instances/{instance_id}/tags
```

Example Response

Example response with status code **200**:

Instance tags queried successfully.

```
{  
  "tags" : [ {  
    "value" : "a",  
    "key" : 1  
  }, {  
    "value" : "b",  
    "key" : 2  
  } ]  
}
```

Status Code

Status Code	Description
200	Instance tags queried successfully.

Error Code

See [Error Codes](#).

10.1 Querying Service Specifications

Function

This API is used to query the product ID (parameter **product_id**) which indicates the specifications of the DCS service you created.

URI

GET /v1.0/products

Request

Request parameters

None

Example request

None

Response

Response parameters

[Table 10-1](#) describes the response parameters.

Table 10-1 Parameter description

Parameter	Type	Description
products	Array	List of specifications of the DCS service to which you can subscribe.

Table 10-2 products parameter description

Parameter	Type	Description
product_id	String	Product ID used to differentiate DCS specifications.

Parameter	Type	Description
spec_code	String	<p>DCS instance specification code. Options:</p> <ul style="list-style-type: none"> • dcs.single_node • dcs.master_standby • dcs.cluster • redis.ha.xu1.tiny.r4.512 • redis.ha.xu1.tiny.r2.128 • redis.cluster.xu1.large.r5.4 • redis.ha.xu1.tiny.r4.256 • redis.ha.xu1.tiny.r2.512 • redis.cluster.xu1.large.r1.32 • redis.cluster.xu1.large.r4.768 • redis.ha.xu1.large.r3.2 • redis.single.xu1.large.64 • redis.cluster.xu1.large.r5.8 • redis.ha.xu1.large.r3.32 • redis.cluster.xu1.large.r2.8 • redis.ha.xu1.large.r4.1 • redis.ha.xu1.tiny.r2.256 • redis.cluster.xu1.large.r4.1024 • redis.ha.xu1.large.r5.16 • redis.cluster.xu1.large.r4.32 • redis.ha.xu1.large.r5.24 • redis.ha.xu1.large.r4.64 • redis.cluster.xu1.large.r2.1024 • redis.ha.xu1.large.r2.48 • redis.ha.xu1.large.r2.24 • redis.ha.xu1.large.r5.64 • redis.ha.xu1.tiny.r5.512 • redis.ha.xu1.large.r3.8 • redis.cluster.xu1.large.r1.768 • redis.ha.xu1.large.r3.24 • redis.cluster.xu1.large.r3.512 • redis.ha.xu1.large.r3.1 • redis.cluster.xu1.large.r4.4 • redis.cluster.xu1.large.r1.24 • redis.ha.xu1.large.r4.2 • redis.cluster.xu1.large.r5.192 • redis.single.xu1.large.16 • redis.cluster.xu1.large.r3.1024

Parameter	Type	Description
		<ul style="list-style-type: none"> redis.ha.xu1.large.p6.32 redis.ha.xu1.large.p6.64 redis.ha.xu1.large.p6.8
cache_mode	String	DCS instance type. Options: <ul style="list-style-type: none"> single: single-node ha: master/standby cluster: Redis Cluster proxy: Proxy Cluster
product_type	String	Edition of DCS for Redis.
cpu_type	String	CPU architecture.
storage_type	String	Storage type.
details	Array of Object	Details of the specifications. Table 10-3 describes the parameters in this array.
engine	String	Cache engine.
engine_versions	String	Cache engine version.
spec_details	String	DCS specifications. The value subjects to the returned specifications.
spec_details2	String	Detailed DCS specifications, including the maximum number of connections and maximum memory size.
charging_type	String	Billing mode. Value: Hourly .
price	Double	Price of the DCS service to which you can subscribe. (This parameter has been abandoned.)
currency	String	Currency.
prod_type	String	Product type. Options: instance and obs_space .
cloud_service_type_code	String	Cloud service type code.
cloud_resource_type_code	String	Cloud resource type code.
flavors	Array	AZs with available resources. Table 10-4 describes the parameters in this array.

Table 10-3 details parameter description

Parameter	Type	Description
capacity	String	Specification (total memory) of the DCS instance.
max_bandwidth	String	Maximum bandwidth supported by the specification.
max_clients	String	Maximum number of clients supported by the specification, which is usually equal to the maximum number of connections.
max_connections	String	Maximum number of connections supported by the specification.
max_in_bandwidth	String	Maximum inbound bandwidth supported by the specification, which is usually equal to the maximum bandwidth.
max_memory	String	Maximum available memory.
tenant_ip_count	String	Number of tenant IP addresses corresponding to the specifications.
sharding_num	String	Number of shards supported by the specifications.
proxy_num	String	Number of proxies supported by Proxy Cluster instances of the specified specifications. If the instance is not a Proxy Cluster instance, the value of this parameter is 0 .
db_number	String	Number of DBs of the specifications.

Table 10-4 flavors parameter description

Parameter	Type	Description
capacity	String	Specification (total memory) of the DCS instance.
unit	String	Capacity unit.
available_zones	Array	AZ ID.

Table 10-11 Status code

Status Code	Description
200	Tenant quota queried successfully.

10.3 Querying Maintenance Time Window

Function

The API is used to query the start time and end time of the maintenance time window.

URI

GET /v1.0/instances/maintain-windows

Request

Request parameters

None

Example request

None

Response

Response parameters

[Table 10-12](#) describes the response parameters.

Table 10-12 Parameter description

Parameter	Type	Description
maintain_windows	Array	List of supported maintenance time windows.

Table 10-13 maintain_windows parameter description

Parameter	Type	Description
seq	Integer	Sequence number of the maintenance time window.

Parameter	Type	Description
begin	String	Start time of the maintenance time window.
end	String	End time of the maintenance time window.
default	Boolean	An indicator of whether the maintenance time window is set to the default time segment.

Example response

```
{  
  "maintain_windows": [  
    {  
      "seq": 1,  
      "begin": "22",  
      "end": "02",  
      "default": false  
    },  
    {  
      "seq": 2,  
      "begin": "02",  
      "end": "06",  
      "default": true  
    },  
    {  
      "seq": 3,  
      "begin": "06",  
      "end": "10",  
      "default": false  
    },  
    {  
      "seq": 4,  
      "begin": "10",  
      "end": "14",  
      "default": false  
    },  
    {  
      "seq": 5,  
      "begin": "14",  
      "end": "18",  
      "default": false  
    },  
    {  
      "seq": 6,  
      "begin": "18",  
      "end": "22",  
      "default": false  
    }  
  ]  
}
```

Status Code

Table 10-14 describes the status code of successful operations. For details about other status codes, see **Table 12-1**.

Table 10-14 Status code

Status Code	Description
200	Successfully queried the maintenance time window.

10.4 Querying AZ Information

Function

This API is used to query the ID of the AZ where a DCS instance resides.

URI

GET /v1.0/availableZones

Request

Request parameters

None

Example request

None

Response

Response parameters

[Table 10-15](#) describes the response parameters.

Table 10-15 Parameter description

Parameter	Type	Description
region_id	String	Region ID.
available_zones	Array	Array of AZs. For details, see Table 10-16 .

Table 10-16 Parameter description of the available_zones array

Parameter	Type	Description
id	String	AZ ID.
code	String	AZ code.
name	String	AZ name.

Parameter	Type	Description
port	String	Port number of the AZ.
resource_availability	String	An indicator of whether there are available resources in the AZ. <ul style="list-style-type: none"> • true: There are available resources in the AZ. • false: There are no available resources in the AZ.

Example response

```
{
  "regionId": "XXXXXX",
  "available_zones": [
    {
      "id": "f84448fd537f46078dd8bd776747f573",
      "code": "XXXXXX",
      "name": "XXXXXX",
      "port": "8003",
      "resource_availability": "true"
    },
    {
      "id": "12c47a78666b4e438cd0c692b9860387",
      "code": "XXXXXX",
      "name": "XXXXXX",
      "port": "8002",
      "resource_availability": "true"
    },
    {
      "id": "0725858e0d26434f9aa3dc5fc40d5697",
      "code": "XXXXXX",
      "name": "XXXXXX",
      "port": "8009",
      "resource_availability": "true"
    }
  ]
}
```

Status Code

[Table 10-17](#) describes the status code of successful operations. For details about other status codes, see [Table 12-1](#).

Table 10-17 Status code

Status Code	Description
200	AZ information queried successfully.

11

Permissions Policies and Supported Actions

This chapter describes fine-grained permissions management for your DCS. If your account does not need individual IAM users, you can skip the configurations described in this chapter.

By default, new IAM users do not have any permissions assigned. You need to add a user to one or more groups, and assign policies or roles to these groups. The user then inherits permissions from the groups it is a member of. This process is called authorization. After authorization, the user can perform specified operations on cloud services based on the permissions.

You can grant users permissions by using roles and policies. Roles are a type of coarse-grained authorization mechanism that defines permissions related to user responsibilities. Policies define API-based permissions for operations on specific resources under certain conditions, allowing for more fine-grained, secure access control of cloud resources.

NOTE

You can use policies to allow or deny access to specific APIs.

An account has all of the permissions required to call all APIs, but IAM users must have the required permissions specifically assigned. The permissions required for calling an API are determined by the actions supported by the API. Only users who have been granted permissions allowing the actions can call the API successfully. For example, if an IAM user wants to query ECSs using an API, the user must have been granted permissions that allow the **dcs:servers:list** action.

Supported Actions

DCS provides system-defined policies, which can be directly used in IAM. You can also create custom policies to supplement system-defined policies for more refined access control. Actions supported by policies are specific to APIs. Common concepts related to policies include:

- Permissions: Allow or deny certain operations.
- APIs: REST APIs that can be called in a custom policy.

- Actions: Added to a custom policy to control permissions for specific operations.
- Dependent actions: When assigning permissions for an action, you also need to assign permissions for the dependent actions.
- IAM and enterprise projects: Type of projects for which an action will take effect. Policies that contain actions supporting both IAM and enterprise projects can be assigned to user groups and take effect in both IAM and Enterprise Management. Policies that only contain actions supporting IAM projects can be assigned to user groups and only take effect for IAM. Such policies will not take effect if they are assigned to user groups in Enterprise Project. Administrators can check whether an action supports IAM projects or enterprise projects in the action list. The check mark (✓) indicates that the action supports the project and the cross symbol (✗) indicates that the action does not support the project.

The following table lists the API actions supported by DCS.

Table 11-1 DCS actions

Permissions	Action	API	IAM Project	Enterprise Project
Creating DCS instances	dcs:instance:create	POST /v1.0/{project_id}/instances	✓	✓
Querying an instance	dcs:instance:get	GET /v1.0/{project_id}/instances/{instance_id}	✓	✓
Modifying the information about an instance	dcs:instance:modify	PUT /v1.0/{project_id}/instances/{instance_id}	✓	✓
Deleting an instance	dcs:instance:delete	DELETE /v1.0/{project_id}/instances/{instance_id}	✓	✓
Expanding instance capacity	dcs:instance:scale	POST /v1.0/{project_id}/instances/{instance_id}/extend	✓	✓
Querying all instances	dcs:instance:list	GET /v1.0/{project_id}/instances	✓	✓
Querying instance configuration parameters	dcs:instance:getConfiguration	GET /v1.0/{project_id}/instances/{instance_id}/configs	✓	✓

Permissions	Action	API	IA M Pro ject	Ent erpr ise Pro jec t

12.1 Status Codes

[Table 12-1](#) describes the status codes.

Table 12-1 Status codes

Status Code	Name	Description
100	Continue	<p>The server has received the initial part of the request and the client should continue to send the remaining part.</p> <p>This provisional response informs the client that part of the request has been received and has not yet been rejected by the server.</p>
101	Switching Protocols	<p>The requester has asked the server to switch protocols and the server has agreed to do so. The target protocol must be more advanced than the source protocol.</p> <p>For example, the current HTTP protocol is switched to a later version of HTTP.</p>
201	Created	The request has been fulfilled, resulting in the creation of a new resource.

Status Code	Name	Description
202	Accepted	The request has been accepted for processing, but the processing has not been completed.
203	Non-Authoritative Information	The server successfully processed the request, but is returning information that may be from another source.
204	NoContent	The server has successfully processed the request, but does not return any content. The status code is returned in response to an HTTP OPTIONS request.
205	Reset Content	The server successfully processed the request, but is not returning any content.
206	Partial Content	The server has successfully processed a part of the GET request.
300	Multiple Choices	There are multiple options for the requested resource. For example, this code could be used to present a list of resource characteristics and addresses from which the client such as a browser may choose.
301	Moved Permanently	This and all future requests should be permanently directed to the given URI indicated in this response.
302	Found	The requested resource was temporarily moved.
303	See Other	The response to the request can be found under a different URI, and should be retrieved using a GET or POST method.
304	Not Modified	The requested resource has not been modified. In such case, there is no need to retransmit the resource since the client still has a previously downloaded copy.
305	Use Proxy	The requested resource is available only through a proxy.
306	Unused	This HTTP status code is no longer used.
400	BadRequest	The request is invalid. The client should modify the request instead of re-initiating it.
401	Unauthorized	The authentication information is incorrect or invalid.
402	Payment Required	Reserved for future use.

Status Code	Name	Description
403	Forbidden	The request is rejected. The server has received the request and understood it, but the server is refusing to respond to it. The client should not repeat the request without modifications.
404	NotFound	The requested resource could not be found. The client should modify the request instead of re-initiating it.
405	MethodNotAllowed	A request method is not supported for the requested resource. The client should modify the request instead of re-initiating it.
406	Not Acceptable	The server could not fulfil the request according to the content characteristics of the request.
407	Proxy Authentication Required	This code is similar to 401, but indicates that the client must first authenticate itself with the proxy.
408	Request Time-out	The server timed out waiting for the request. The client may re-initiate the request without modifications at any later time.
409	Conflict	The request cannot be processed due to a conflict. This status code indicates that the resource that the client attempts to create already exists, or the request fails to be processed because of the update of the conflict request.
410	Gone	The requested resource is no longer available. The requested resource has been deleted permanently.
411	Length Required	The server refused to process the request because the request does not specify the length of its content.
412	Precondition Failed	The server does not meet one of the preconditions that the requester puts on the request.
413	Request Entity Too Large	The request is larger than the server is willing or able to process. The server may close the connection to prevent the client from continuing the request. If the server temporarily cannot process the request, the response will contain a Retry-After header field.

Status Code	Name	Description
414	Request-URI Too Large	The URI provided was too long for the server to process.
415	Unsupported Media Type	The server does not support the media type in the request.
416	Requested range not satisfiable	The requested range is invalid.
417	Expectation Failed	The server fails to meet the requirements of the Expect request-header field.
422	UnprocessableEntity	The request was well-formed but was unable to be followed due to semantic errors.
429	TooManyRequests	The client has sent more requests than its rate limit is allowed within a given amount of time, or the server has received more requests than it is able to process within a given amount of time. In this case, it is advisable for the client to re-initiate requests after the time specified in the Retry-After header of the response expires.
500	InternalServerError	The server is able to receive the request, but it could not understand the request.
501	Not Implemented	The server does not support the requested function.
502	Bad Gateway	The server was acting as a gateway or proxy and received an invalid request from a remote server.
503	ServiceUnavailable	The requested service is invalid. It is advisable for the client to modify the request instead of re-initiating the request.
504	ServerTimeout	The server could not return a timely response. The response will reach the client only if the request carries a timeout parameter.
505	HTTP Version not supported	The server does not support the HTTP protocol version used in the request.

12.2 Error Codes

Status Code	Error Codes	Error Message	Description	Solution
400	111400002	Invalid project ID format.	Invalid project ID format.	Check whether the project ID is valid.
400	111400004	Empty request body.	Empty request body.	Check whether mandatory parameters in the request are set.
400	111400005	The message body contains invalid characters or is not in JSON format.	The message body contains invalid characters or is not in JSON format.	Check whether the request parameters are valid.
400	111400007	The selected cache engine type is not supported.	The selected cache engine type is not supported.	Check whether the request parameters are valid.
400	111400008	The selected cache engine version is not supported.	The selected cache engine version is not supported.	Check whether the request parameters are valid.
400	111400009	Invalid product ID in the request.	Invalid product ID in the request.	Check whether the request parameters are valid.
400	111400010	Invalid DCS instance name. The name must be 4 to 64 characters in length. Only letters (case-insensitive), digits, underscores (_), and hyphens (-) are allowed.	Invalid instance name. The name can contain 4 to 64 characters. Only letters, digits, underscores (_), and hyphens (-) are allowed.	Check whether the request parameters are valid.

Status Code	Error Codes	Error Message	Description	Solution
400	111400011	DCS instance description cannot exceed 1024 characters.	DCS instance description cannot exceed 1024 characters.	Check whether the request parameters are valid.
400	111400012	Invalid capacity parameter in the request.	Invalid capacity parameter in the request.	Check whether the request parameters are valid.
400	111400013	Invalid vpc_id in the request.	Invalid vpc_id in the request.	Check whether the request parameters are valid.
400	111400014	Invalid security_group_id in the request.	Invalid security_group_id in the request.	Check whether the request parameters are valid.
400	111400016	Invalid subnet_id in the request.	Invalid subnet_id in the request.	Check whether the request parameters are valid.
400	111400017	This DCS instance job task is still running.	This DCS instance job task is still running.	Try again later.
400	111400018	This subnet must exist in the VPC.	This subnet must exist in the VPC.	Check whether the request parameters are valid.
400	111400019	The password does not meet complexity requirements.	The password does not meet complexity requirements.	Check whether the request parameters are valid.
400	111400020	DHCP must be enabled for this subnet.	DHCP must be enabled for this subnet.	Check whether DHCP has been enabled.

Status Code	Error Codes	Error Message	Description	Solution
400	111400021	The isAutoRenew parameter in the request must be either 0 or 1.	The isAutoRenew parameter in the request must be either 0 or 1.	Check whether the request parameters are valid.
400	111400022	Engine does not match the product id.	The cache engine does not match the product ID.	Check whether the request parameters are valid.
400	111400026	This operation is not allowed when the DCS instance is in the current state.	This operation is not allowed when the DCS instance is in the current state.	Try again later or contact technical support.
400	111400027	This operation is not supported on this node.	This operation is not supported on this node.	Try again later or contact technical support.
400	111400035	DCS instance quota of the tenant is insufficient.	DCS instance quota of the tenant is insufficient.	Contact technical support.
400	111400036	Memory quota of the tenant is insufficient.	Memory quota of the tenant is insufficient.	Contact technical support.
400	111400037	The instanceParams parameter in the request contains invalid characters or is not in JSON format.	The instanceParams parameter in the request contains invalid characters or is not in JSON format.	Check whether the request parameters are valid.
400	111400038	The periodNum parameter in the request must be an integer.	The periodNum parameter in the request must be an integer.	Check whether the request parameters are valid.

Status Code	Error Codes	Error Message	Description	Solution
400	111400039	The quota limit has been reached.	The quota limit has been reached.	Check whether the request parameters are valid.
400	111400042	This AZ does not exist.	This AZ does not exist.	Check whether the request parameters are valid.
400	111400045	This DCS instance is already unfrozen.	This DCS instance is already unfrozen.	Check whether the request parameters are valid.
400	111400046	This security group does not exist.	This security group does not exist.	Check whether the request parameters are valid.

500	DCS.5043	Call IAM API for querying permission failed.	Call IAM API for querying permission failed.	Contact technical support.

Status Code	Error Codes	Error Message	Description	Solution
500	DCS.5044	update resource status fail	Failed to update the status of the instance.	Contact technical support.
500	DCS.5045	Call IAM API for adding project-level agency permissions failed.	Call IAM API for adding project-level agency permissions failed.	Contact technical support.
500	DCS.5053	Instance node not found.	Instance node not found.	Contact technical support.
500	DCS.5054	Failed to generate password.	Failed to generate a password.	Contact technical support.
500	DCS.5070	Internal service error.	Internal service error.	Contact technical support.
500	DCS.5071	Failed to create instance backup strategy.	Failed to create the instance backup policy.	Contact technical support.
500	DCS.5077	Query instance failed.	Failed to query the instance backup policy.	Contact technical support.
500	DCS.5078	Query backup record failed.	Failed to query the backup record.	Contact technical support.
500	DCS.5079	Query group node failed.	Failed to query the restoration record.	Contact technical support.
500	DCS.5081	The resource tenant does not exist.	The resource tenant does not exist.	Contact technical support.
500	DCS.5082	Failed to register resource tenant backup user.	Failed to register the resource tenant backup user.	Contact technical support.

Status Code	Error Codes	Error Message	Description	Solution
500	DCS.5083	Failed to save backup user.	The backup user fails to be saved.	Contact technical support.
500	DCS.5085	Failed to update backup strategy.	The backup policy fails to be updated.	Contact technical support.
500	DCS.5090	Failed to save backup information.	The backup information fails to be saved.	Contact technical support.
500	DCS.5091	Script execution failed.	Script execution failed.	Contact technical support.
500	DCS.5092	Failed to save and restore data.	Failed to save and restore data.	Contact technical support.
500	DCS.5095	The script execution failed and needs to be retried.	Script execution failed and needs to be retried.	Contact technical support.
500	DCS.5104	Failed to modify order.	Failed to modify the order.	Contact technical support.
400	DCS.4202	ssl request params are invalid.	ssl request params are invalid.	Check whether the request parameters are valid.
400	DCS.4933	The param available_zones is invalid.	Check available_zones are valid.	Check whether the request parameters are valid.
400	DCS.5050	Shared VPCs are not supported.	Not Supported shared vpc.	Check whether the request parameters are valid.

12.3 Obtaining a Project ID

Obtaining a Project ID by Calling an API

You can obtain a project ID by calling the API used to query project information based on the specified criteria.

The API used to obtain a project ID is **GET <https:///{Endpoint}/v3/projects>**. {Endpoint} is the IAM endpoint and can be obtained from [Regions and Endpoints](#). For details on API calling authentication, see [Authentication](#).

The following is an example response. The value of **id** in the **projects** section is the project ID.

```
{  
  "projects": [  
    {  
      "domain_id": "65382450e8f64ac0870cd180d14e684b",  
      "is_domain": false,  
      "parent_id": "65382450e8f64ac0870cd180d14e684b",  
      "name": "project_name",  
      "description": "",  
      "links": {  
        "next": null,  
        "previous": null,  
        "self": "https://www.example.com/v3/projects/a4a5d4098fb4474fa22cd05f897d6b99"  
      },  
      "id": "a4a5d4098fb4474fa22cd05f897d6b99",  
      "enabled": true  
    }  
  ],  
  "links": {  
    "next": null,  
    "previous": null,  
    "self": "https://www.example.com/v3/projects"  
  }  
}
```

Obtaining a Project ID from the Console

A project ID is required for some URLs when an API is called.

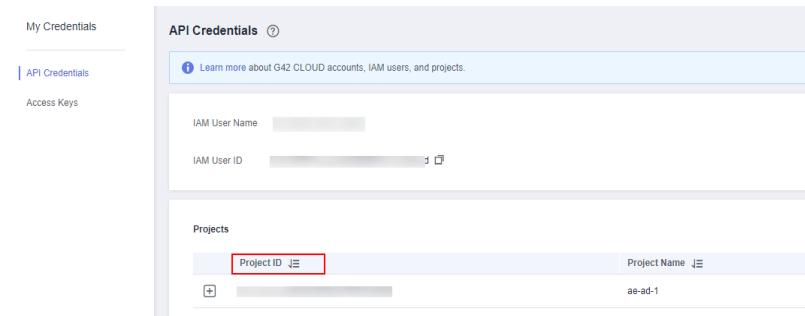

To obtain a project ID, perform the following operations:

Step 1 Sign up and log in to the management console.

Step 2 Click the username in the upper right corner and choose **My Credentials** from the drop-down list.

Step 3 On the **My Credentials** page, view project IDs in the project list.

Figure 12-1 Viewing project IDs

----End

12.4 Obtaining the Account Name and Account ID

The account name and account ID are required for some URLs when an API is called. To obtain the account name and account ID, perform the following operations:

1. Register an account and log in to the console.
2. Click the username and choose **My Credentials** from the drop-down list.
3. On the **My Credentials** page, view the **Account Name** and **Account ID**.

12.5 DCS Instance Statuses

Table 12-2 DCS instance statuses

State	Description
CREATING	Creating is the status before the Running state.
CREATEFAILED	The DCS instance failed to be created.
RUNNING	The instance is running properly. Only instances in the Running state can provide in-memory cache service.
ERROR	The instance is not running properly.
RESTARTING	The instance is being restarted.
EXTENDING	The instance is being scaled up.
RESTORING	The instance data is being restored.

A Change History

Table A-1 Change history

Released On	Description
2023-05-15	Updated the supported actions in Permissions Policies and Supported Actions .
2023-04-18	Updated Obtaining the Account Name and Account ID .
2022-12-20	This issue is the sixth official release. <ul style="list-style-type: none">In section Querying All DCS Instances of a Tenant, added the <code>include_failure</code> parameter and deleted the <code>isExactMatchName</code> parameter.In section Querying DCS Instance Status, added parameters such as <code>redis</code>, and changed the <code>includeFailure</code> parameter to <code>include_failure</code>.In section Querying AZ Information, changed the <code>regionID</code> parameter to <code>region_id</code>.
2022-08-08	This issue is the fifth official release. Added the description of the <code>spec_code</code> parameter and cache capacity of Proxy Cluster DCS Redis 4.0 and 5.0 instances in Creating a DCS Instance .
2021-11-30	This issue is the fourth official release.
2021-08-30	This issue is the third official release. Added description about data migration in Data Migration APIs .
2021-07-30	This issue is the second official release. Added detailed description about permissions management in Permissions Policies and Supported Actions .
2020-09-30	This issue is the first official release.
